## In-Line Electric Pumps

### GFC Series

## MARKET SECTORS

CIVIL, INDUSTRIAL.

## APPLICATIONS

- Water circulation in heating and air conditioning systems.
- Handling of water and clean, chemically non-aggressive liquids.
- Water supply.
- Irrigation.

## SPECIFICATIONS

### PUMP

- **Delivery** up to 190 m<sup>3</sup>/h, 2-pole.  
330 m<sup>3</sup>/h, 4-pole.
- **Head** up to 89 m, 2-pole.  
35 m, 4-pole.
- **Temperature** of pumped liquid:  
-10°C to +130°C for "E" version,  
-20°C to +140°C for "S" version  
(depending on working pressure).
- **Maximum working pressure:**  
10 bar (PN 10) for the "E" version,  
16 bar (PN 16) for the "S" version  
up to 120°C, 13 bar from 120°C to  
140°C.
- **Impeller** made of AISI 316L  
stainless steel, **laser technology**  
welded, up to size 80-160.  
Cast iron impeller for bigger sizes.  
Bronze impeller available on request  
for GFCT 80-200 and bigger, in both  
the "E" and "S" versions.
- **Wear rings** made of AISI 316L  
stainless steel, up to GFC 100, on the  
impeller's front and rear wear plates,  
to ensure high performance and easy  
replacement.
- **Mechanical seal** according to  
EN12756 (ex DIN 24960), lubricated  
by internal recirculation of pumped  
liquid to seal housing (up to GFC 100).  
Mechanical seal locking pin slot on  
models up to GFC 100 (on request).
- Air valve on models up to GFC 100.
- Counterflange kits available on  
request.

### MOTOR

- Three-phase asynchronous, squirrel  
cage rotor, enclosed construction,  
external ventilation.
- IP55 **protection**.
- Class 155 (F) **insulation**.
- Performances according to  
EN 60034-1.
- Maximum ambient temperature:  
+40°C.
- Continuous duty.
- Condensate drain plugs on all  
standard internal production motors.
- **Standard voltage:**  
**Single-phase** version 220-240 V,  
50 Hz, with built-in automatic reset  
overload protection up to 1,5 kW.  
For higher powers the protection is  
be provided by the user.  
**Three-phase** version:  
220-240/380-415 V 50 Hz for powers  
up to 3 kW;  
380-415/660-690 V, 50 Hz for powers  
above 3 kW.  
Overload protection to be provided  
by the user.
- **Standard supplied IE2/IE3  
motors are compliant with  
Regulation (EC) no. 640/2009  
and IEC 60034-30.**

## CONSTRUCTION FEATURES

Single-impeller centrifugal pump with in-line suction and delivery flanges.

Flanges in compliance with EN 1092-2 (ex UNI 2236) and DIN 2532.

“Back pull-out” design (impeller, adapter and motor can be extracted without disconnecting the pump body from the pipes).

### GFCE SERIES CHARACTERISTICS

Pump coupling: close-coupled by means of an adapter, with impeller keyed directly to the motor shaft extension.

Maximum operating pressure: 10 bar (PN 10).

Temperature of pumped liquid: -10°C to 130°C.

### GFCS SERIES CHARACTERISTICS

Pump coupling: by adapter, with bracket and rigid coupling keyed to the shaft extension of standard motors.

Maximum operating pressure: 16 bar (PN 16) up to 120°C, 13 bar from 120°C to 140°C.

Temperature of pumped liquid: -20°C to 140°C.

### GFCS..H SERIES CHARACTERISTICS

Variable speed control, using the HIDROVAR® and HIDROVAR® Sensorless (on request), control system, is recommended for managing pump operation according to system conditions. This ensures energy savings, lower operating costs, greater comfort and environmental protection.

This option is available for both the GFCE and GFCS series, and includes the HIDROVAR® and HIDROVAR® Sensorless (on request) controller and sensors.

### ACCESSORIES ON REQUEST

Threaded steel or galvanized iron counterflanges.

Blind flange.

Pump support.

### OPTIONAL FEATURES

Different voltages and frequencies.

Different materials for the mechanical seal and pump body seal.

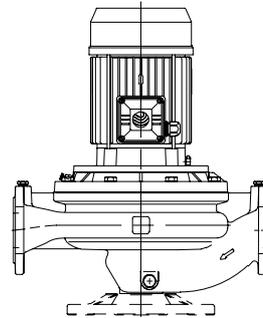

Support available for vertical mounting (where added).

### INSTALLATION

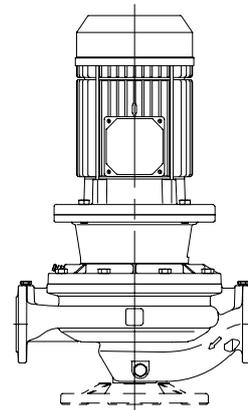

Installed in horizontal or vertical piping, in any position except with motor or terminal box facing downward.

Motor powers 5,5 kW and higher, for installations with motor shaft in the vertical position, the electric pump should be mounted on a base, the pump should rest on its feet or on the support foot (optional accessory). For installations with motor shaft in the horizontal position, use a support foot for the motor.

## In-Line Twin Electric Pumps

## GFCT Series

### MARKET SECTORS

CIVIL, INDUSTRIAL.

### APPLICATIONS

- Water circulation in heating and air conditioning systems.
- Handling of water and clean, chemically non-aggressive liquids.
- Water supply.
- Irrigation.

### SPECIFICATIONS

#### PUMP

- **Delivery** with one pump running: up to 190 m<sup>3</sup>/h with 2-pole motor, up to 330 m<sup>3</sup>/h with 4-pole motor; with two pumps running: up to 350 m<sup>3</sup>/h with 2-pole motor, up to 610 m<sup>3</sup>/h with 4-pole motor.
- **Head** up to 89 m with 2-pole motor, up to 35 m with 4-pole motor.
- **Temperature** of pumped liquid: -10 to 130°C for the "E" version, -20 to 140°C for the "S" version (depending on working pressure).

- **Maximum working pressure:** 10 bar (PN 10) for the "E" version, 16 bar (PN 16) for the "S" version up to 120°C, 13 bar from 120°C to 140°C.
- **Impeller** made of AISI 316L stainless steel, **laser technology** welded, up to size 80-160. Cast iron impeller for bigger sizes. Bronze impeller available on request for GFCT 80-200 and bigger, in both the "E" and "S" versions.
- **Wear rings** made of AISI 316L stainless steel, up to GFCT 100, on the impeller's front and rear wear plates, to ensure high performance and easy replacement.
- **Mechanical seal** according to EN12756 (ex DIN 24960), lubricated by internal recirculation of pumped liquid to seal housing (up to GFCT 100). Mechanical seal locking pin slot on models up to GFCT 100 (on request).

- Air valve on models up to GFCT 100.
- Counterflange kits available on request.

#### MOTOR

- Three-phase asynchronous, squirrel cage rotor, enclosed construction, external ventilation.
- IP55 **protection**.
- Class 155 (F) **insulation**.
- Performances according to EN 60034-1.
- Maximum ambient temperature: +40°C.
- Continuous duty.
- Condensate drain plugs on all standard internal production motors.
- **Standard voltage:** **Single-phase** version 220-240 V, 50 Hz, with built-in automatic reset overload protection up to 1,5 kW. For higher powers the protection is provided by the user. **Three-phase** version: 220-240/380-415 V 50 Hz for powers up to 3 kW; 380-415/660-690 V, 50 Hz for powers above 3 kW. Overload protection to be provided by the user.
- **Standard supplied IE2/IE3 motors are compliant with Regulation (EC) no. 640/2009 and IEC 60034-30.**

## CONSTRUCTION FEATURES

Two single-impeller centrifugal pumps featuring in-line suction and delivery flanges, with automatic changeover valve. The two pumps can operate separately or in parallel.

Flanges in compliance with EN 1092-2 (ex UNI 2236) and DIN 2532.

“Back pull-out” design (impeller, adapter and motor can be extracted without disconnecting the pump body from the pipes).

### GFCTE SERIES CHARACTERISTICS

Pump coupling: close-coupled by means of an adapter, with impeller keyed directly to the motor shaft extension.

Maximum operating pressure: 10 bar (PN 10).

Temperature of pumped liquid: -10°C to 130°C.

### GFCTS SERIES CHARACTERISTICS

Pump coupling: by adapter, with bracket and rigid coupling keyed to the shaft extension of standard motors.

Maximum operating pressure: 16 bar (PN 16) up to 120°C, 13 bar from 120°C to 140°C.

Temperature of pumped liquid: -20°C to 140°C.

### GFCT..H SERIES CHARACTERISTICS (ON REQUEST)

Variable speed control, using the HIDROVAR® and HIDROVAR® Sensorless (on request), control system, is recommended for managing pump operation according to system conditions. This ensures energy savings, lower operating costs, greater comfort and environmental protection.

This option is available for both the GFCTE and GFCTS series, and includes the HIDROVAR® and HIDROVAR® Sensorless controller and sensors.

### ACCESSORIES ON REQUEST

Threaded steel or galvanized iron counterflanges.

Blind flange.

Pump support.

### OPTIONAL FEATURES

Different voltages and frequencies.

Different materials for the mechanical seal and pump body seal.

Support available for vertical mounting.

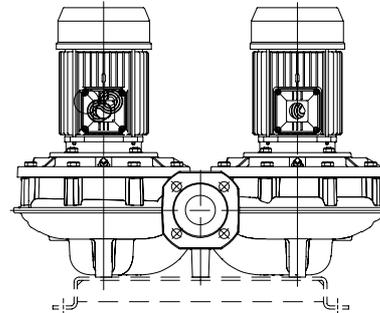

Version with frequency converter (variable speed).

### INSTALLATION

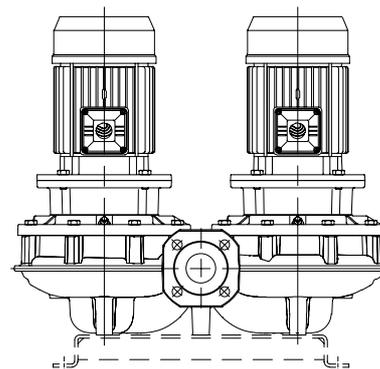

Can be installed on horizontal or vertical piping, in any position except with motor or terminal board facing downward.

With motor powers 5,5 kW and up, for installations with motor shaft in the vertical position, the electric pump should be mounted on a base, the pump should rest on its feet or on the support foot (optional accessory). For installations with motor shaft in the horizontal position, use a support for the motor.

## MOTORS FOR GFC-GFCT SERIES

**Standard supplied IE2/IE3 three-phase surface motors  $\geq 0,75$  kW are compliant with Regulation (EC) no. 640/2009 and IEC 60034-30.**

Enclosed short circuit squirrel cage motor (TEFC), with external ventilation.

Electrical performances according to EN 60034-1.

Insulation class 155 (F).

IP55 protection.

Condensate drain plugs on standard version.

Cooling by fan according to EN 60034-6.

Cable gland metric size according to EN 50262.

Standard voltage:

- Single-phase version: 220-240 V 50 Hz, with incorporated automatic-reset overload protection up to 1,5 kW.
- Three-phase version: 220-240/380-415 V 50 Hz for powers up to 3 kW. 380-415/660-690 V 50 Hz for powers above 3 kW. Overload protection to be provided by the user.

## MOTOR NOISE

The tables below show the mean sound pressure levels (Lp) measured at 1 meter's distance in a free field according to the A curve (ISO 1680 standard).

The noise values are measured with idling 50 Hz motor with a tolerance of 3 dB (A).

### GFCE-GFCS-GFCTE-GFCTS MOTORS 50 Hz 2-POLE

## **GFCH-GFCTH SERIES ELECTRIC PUMPS WITH HYDROVAR® AND HYDROVAR® SENSORLESS CONTROL SYSTEM**

We recommend the use of the GFC-GFCT series electric pumps combined with the HYDROVAR® and HYDROVAR® Sensorless devices.

HYDROVAR® and HYDROVAR® Sensorless are micro-processor controlled devices for pumping systems, designed to control pump operation according to system conditions and requirements.

This way the simple electric pump is transformed into a complete pumping system principally designed for air-conditioning and heating applications, adapting the differential pressure of the closed circuit to the requested load.

- **No special pumps or motors:**

HYDROVAR® is mounted directly onto a standard three-phase TEFC motor with class F insulation up to 22 kW power. (HYDROVAR® Sensorless up to 4 kW).

- HYDROVAR® Sensorless enables the control of an electric circulator pump by monitoring the power control, without requiring a differential pressure transmitter.

- **No separate control panels or converters:** HYDROVAR® and HYDROVAR® Sensorless, perform all the functions of a pump control panel, incorporating protections against overload, short circuit, high temperature, etc. The only external device required is a fuse on the power supply line. Will depend upon any local electrical installation regulations.

- **No by-pass lines or safety systems:** With HYDROVAR® the pump switches off immediately when demand is zero or exceeds the maximum capacity of the pump. This way there is no need to install additional safety devices.

- **The pump's operation at the correct speed based on system requirements enables energy consumption to be substantially reduced.**

## GENERAL OPERATING PRINCIPLES OF THE HYDROVAR® SYSTEM

The basic function of the HYDROVAR® device is to control the pump to meet the system demands.

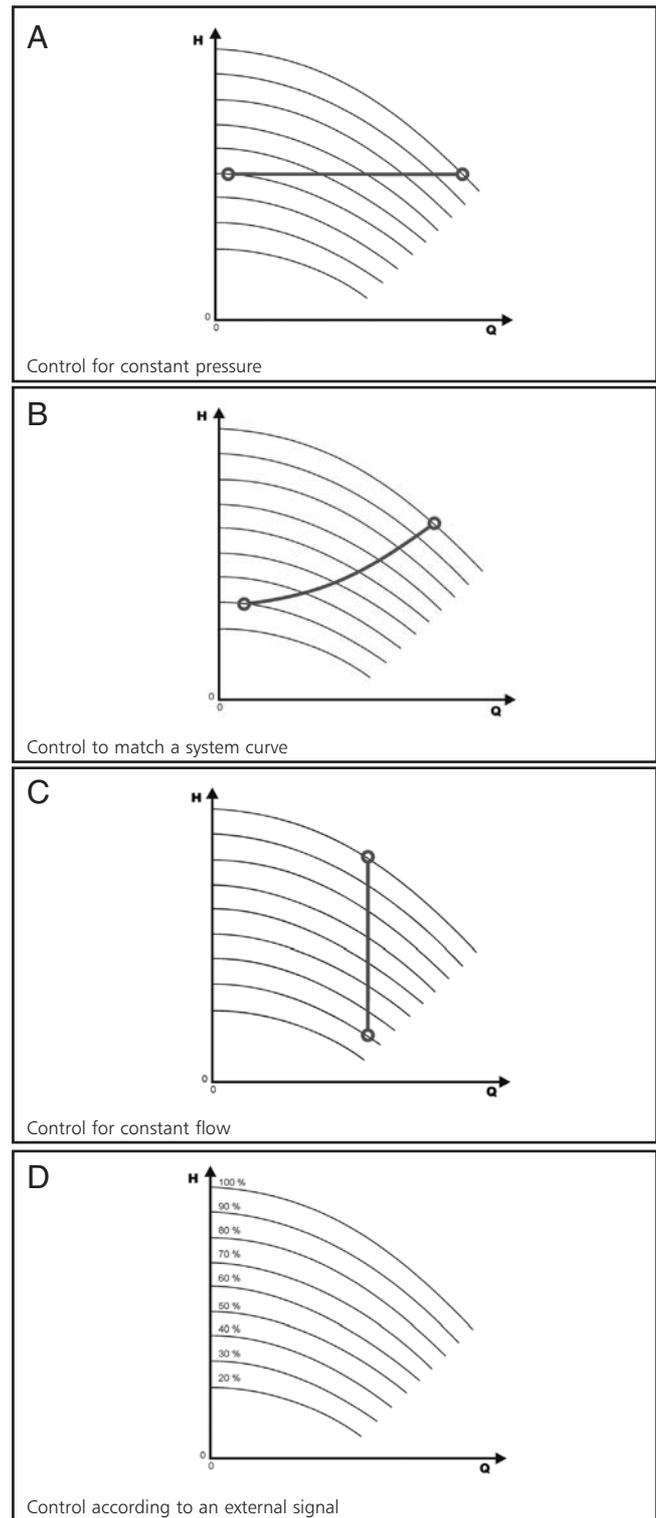

For the FC and FCT series electric pumps, typical operation consists in system regulation based on the characteristic curve (B).

### HYDROVAR® performs these functions by:

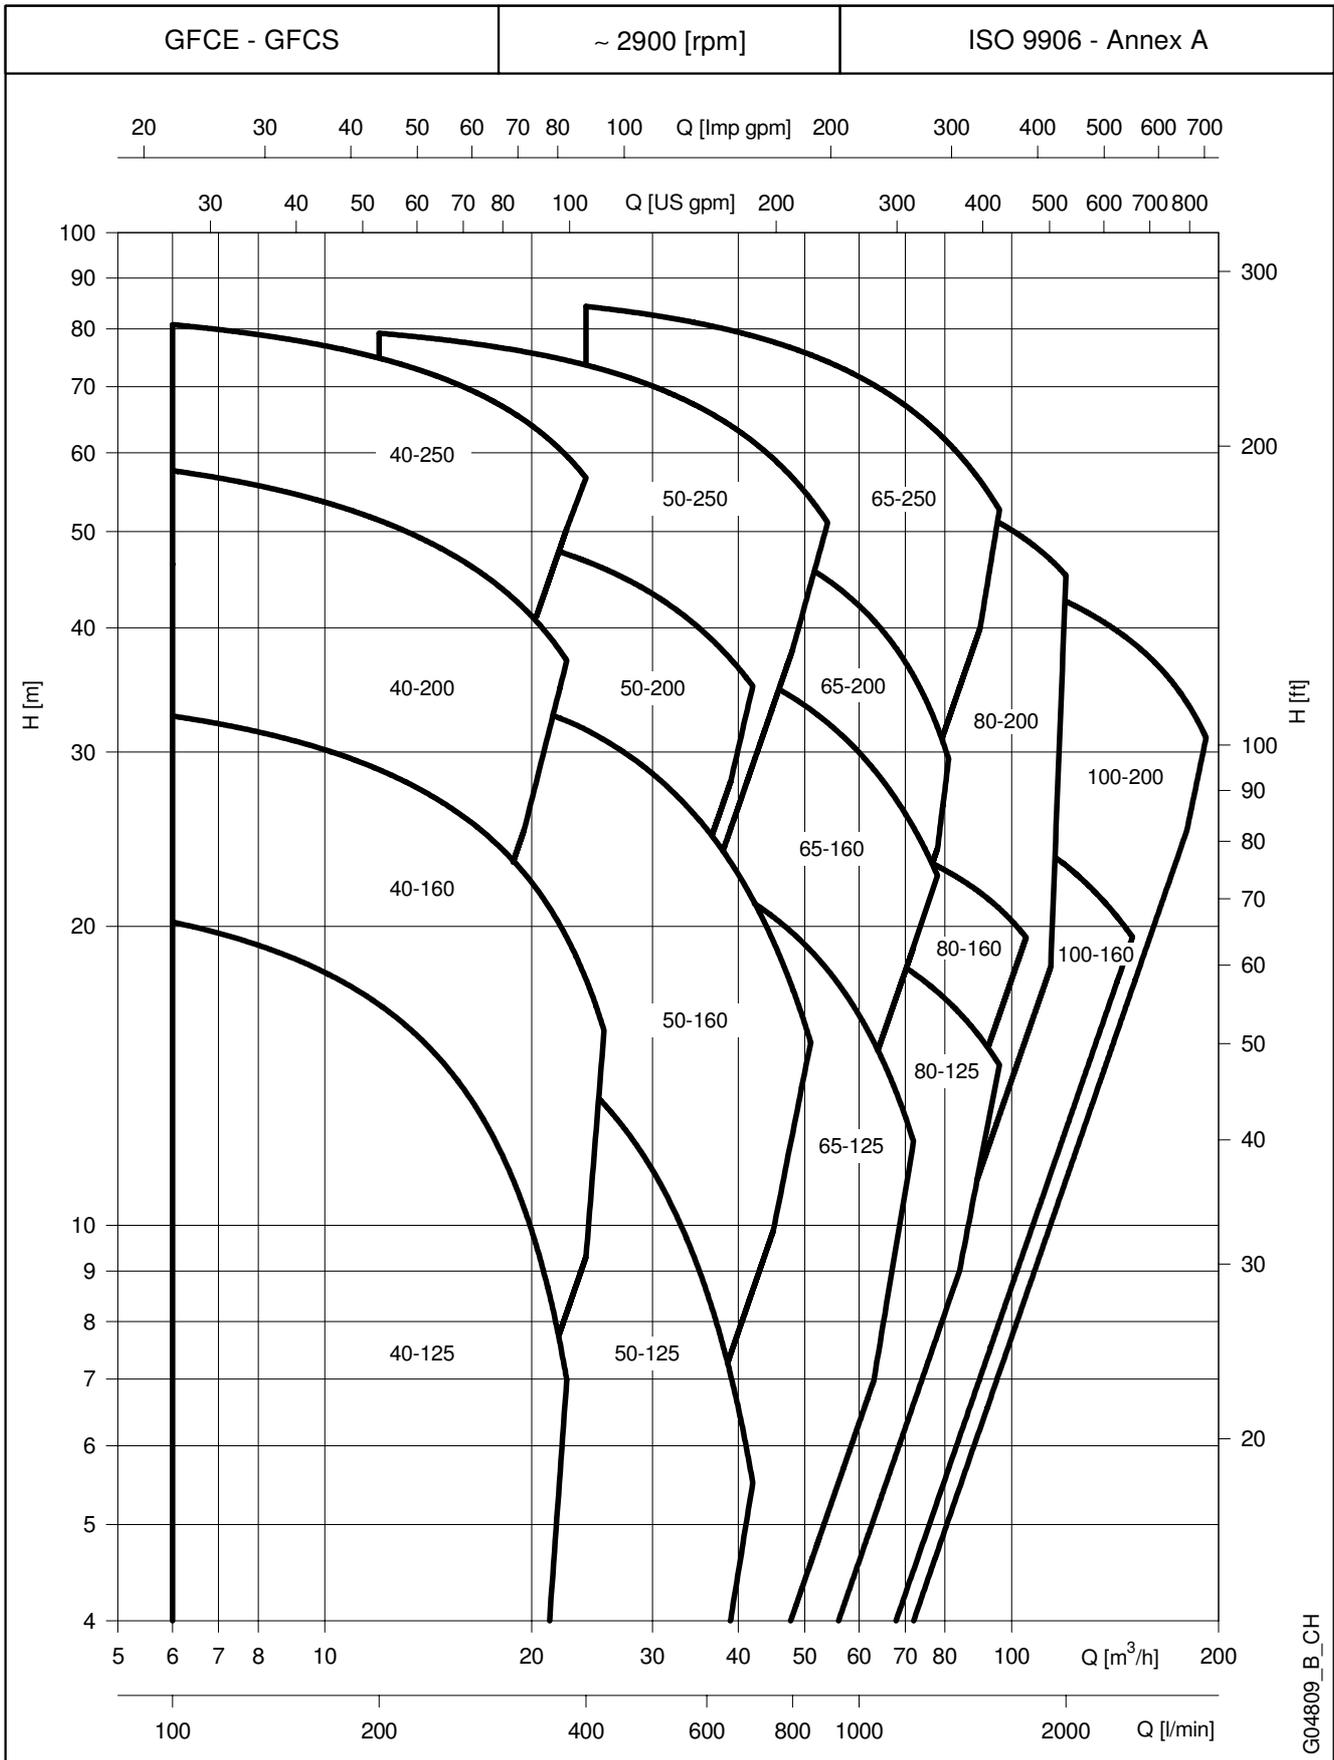

- 1) Measuring the system pressure or flow via a transmitter mounted on the pump's delivery side.
- 2) Calculating the motor speed to maintain the correct flow or pressure.
- 3) Sending out a signal to the pump to start the motor, increase speed, decrease speed or stop.
- 4) In the case of multiple pump installations, HYDROVAR® will automatically provide for the cyclic changeover of the pumps' starting sequence

In addition to these basic functions, HYDROVAR® can do things only by the most advanced computerised control systems, such as:

- Stop the pump(s) at zero demand.
- Stop the pump(s) in case of water failure on the suction side (protection against dry running).
- Stop the pump if the required delivery exceeds the pump's capacity (protection against cavitation caused by excessive demand), or automatically switch on the next pump in a multiple series.
- Protect the pump and motor from overvoltage, undervoltage, overload and earth fault.
- Vary the pump speed acceleration and deceleration time.
- Compensate for increased flow resistance at high flow rates.
- Conduct automatic test starts at set intervals.
- Monitor the converter and motor operating hours.
- Display all functions on an LCD in different languages (Italian, English, French, German, Spanish, Portuguese, Dutch).
- Send a signal to a remote control system which is proportional to the pressure and frequency.
- Communicate with another HYDROVAR or control system via an RS 485 interface.

**GFCE-GFCS SERIES**  
**HYDRAULIC PERFORMANCE RANGE AT 50 Hz, 2 POLES**

G04809\_B\_CH

These performances are valid for liquids with density  $\rho = 1,0 \text{ Kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{sec}$ .

The NPSH values are laboratory values; for practical use we suggest increasing these values by 0,5 m.  
 These performances are valid for liquids with density  $\rho = 1,0 \text{ Kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{sec}$ .

**GFCTE-GFCTS SERIES (SINGLE OPERATION)  
 HYDRAULIC PERFORMANCE RANGE AT 50 Hz, 2 POLES**

G05209A\_B\_CH

These performances are valid for liquids with density  $\rho = 1,0 \text{ Kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{sec}$ .

\* GFCTE4 VERSION ONLY

gfcte4-gfcts4-4p50P-en\_e\_th

Performances according to ISO 9906 - Annex A.

**GFCTS4 SERIES (SINGLE OPERATION)  
HYDRAULIC PERFORMANCE RANGE AT 50 Hz, 4 POLES**

**GFCTS4 SERIES (PARALLEL OPERATION)  
HYDRAULIC PERFORMANCE RANGE AT 50 Hz, 4 POLES**

These performances are valid for liquids with density  $\rho = 1,0 \text{ Kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{sec}$ .

**GFCTE-GFCTS SERIES**  
**OPERATING CHARACTERISTICS AT 50 Hz, 2 POLES**

G05211\_B\_CH

The NPSH values are laboratory values; for practical use we suggest increasing these values by 0,5 m.  
 These performances are valid for liquids with density  $\rho = 1,0 \text{ Kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{sec}$ .

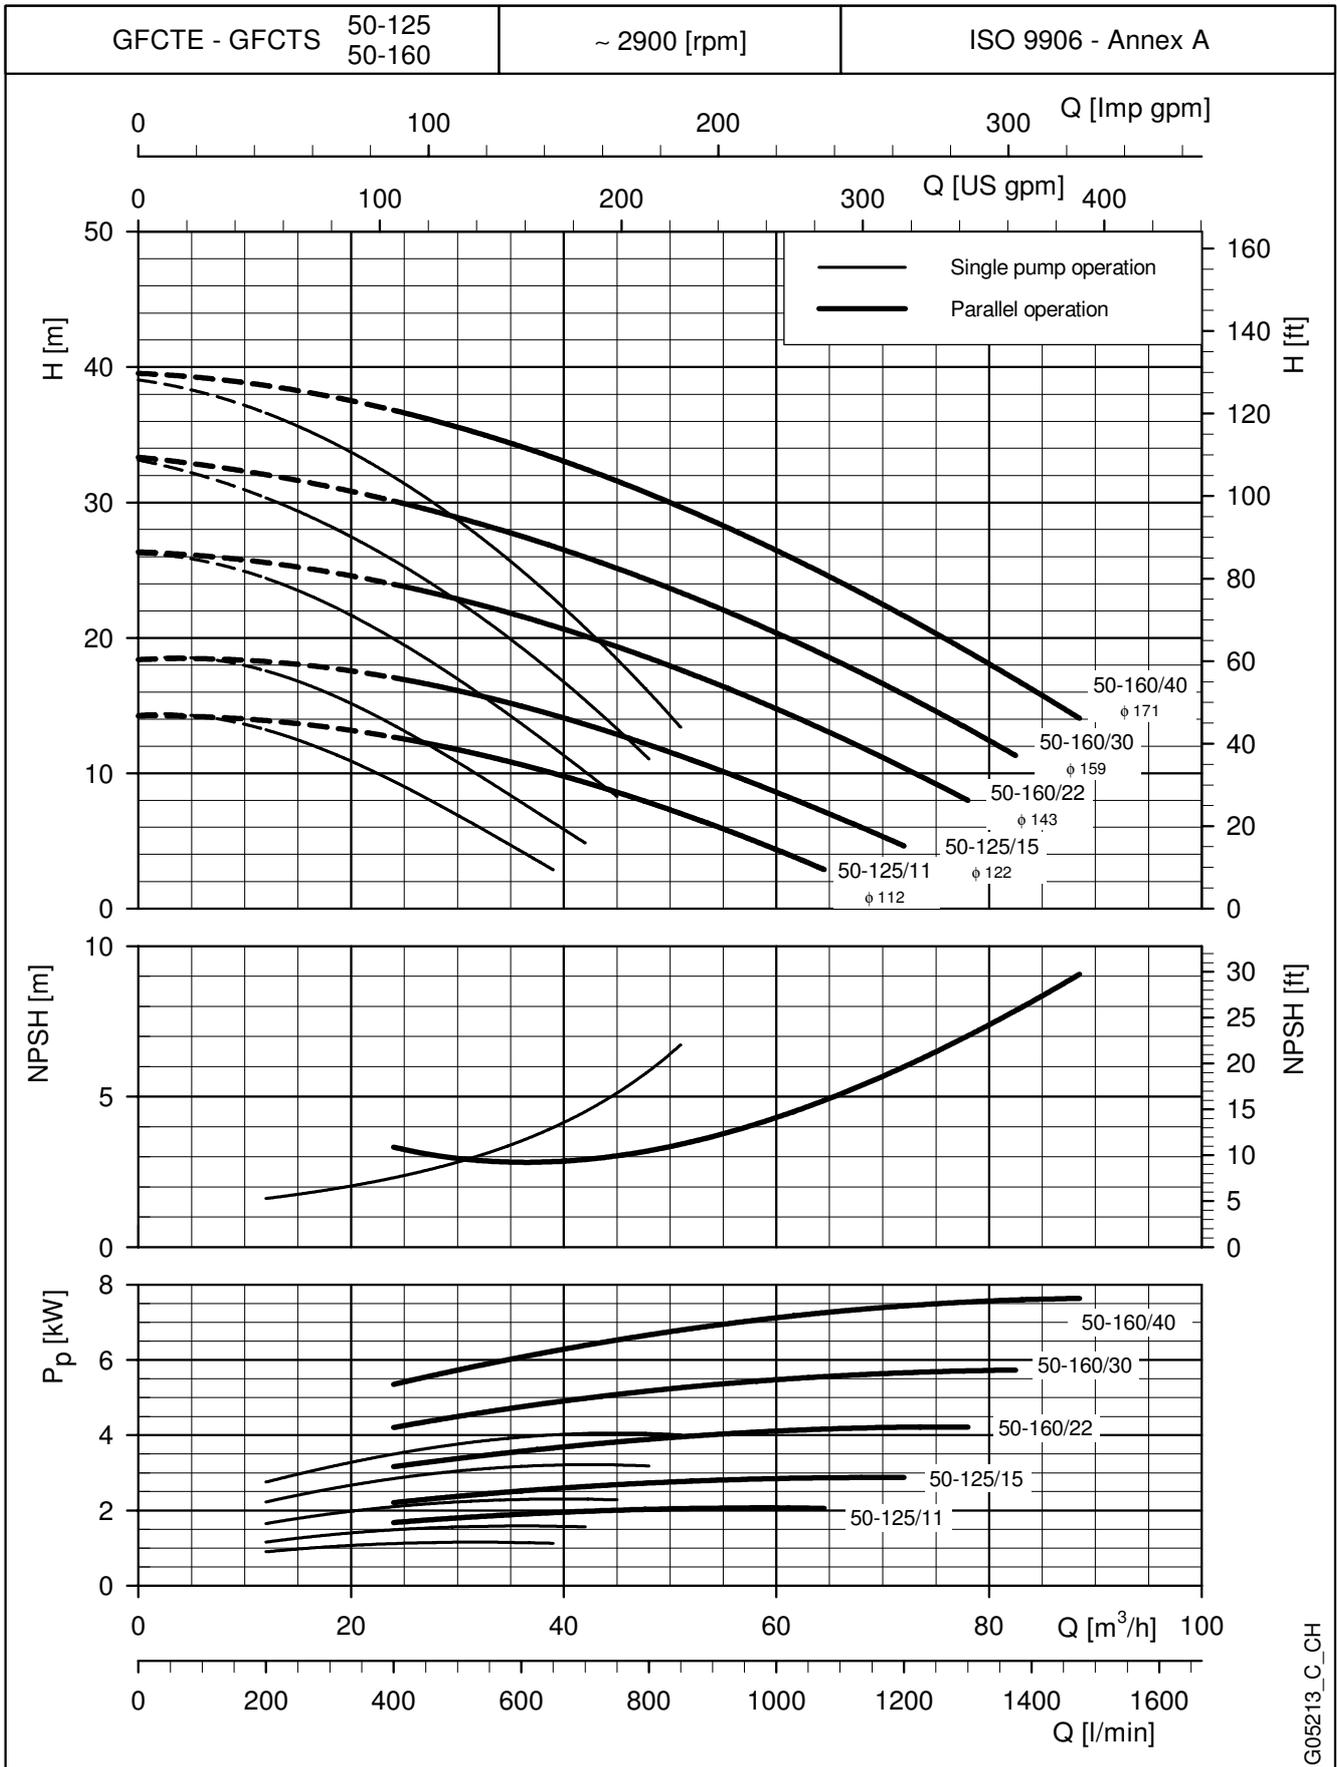

**GFCTE-GFCTS SERIES**  
**OPERATING CHARACTERISTICS AT 50 Hz, 2 POLES**

05212\_B\_CH

The NPSH values are laboratory values; for practical use we suggest increasing these values by 0,5 m.  
 These performances are valid for liquids with density  $\rho = 1,0 \text{ Kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{sec}$ .

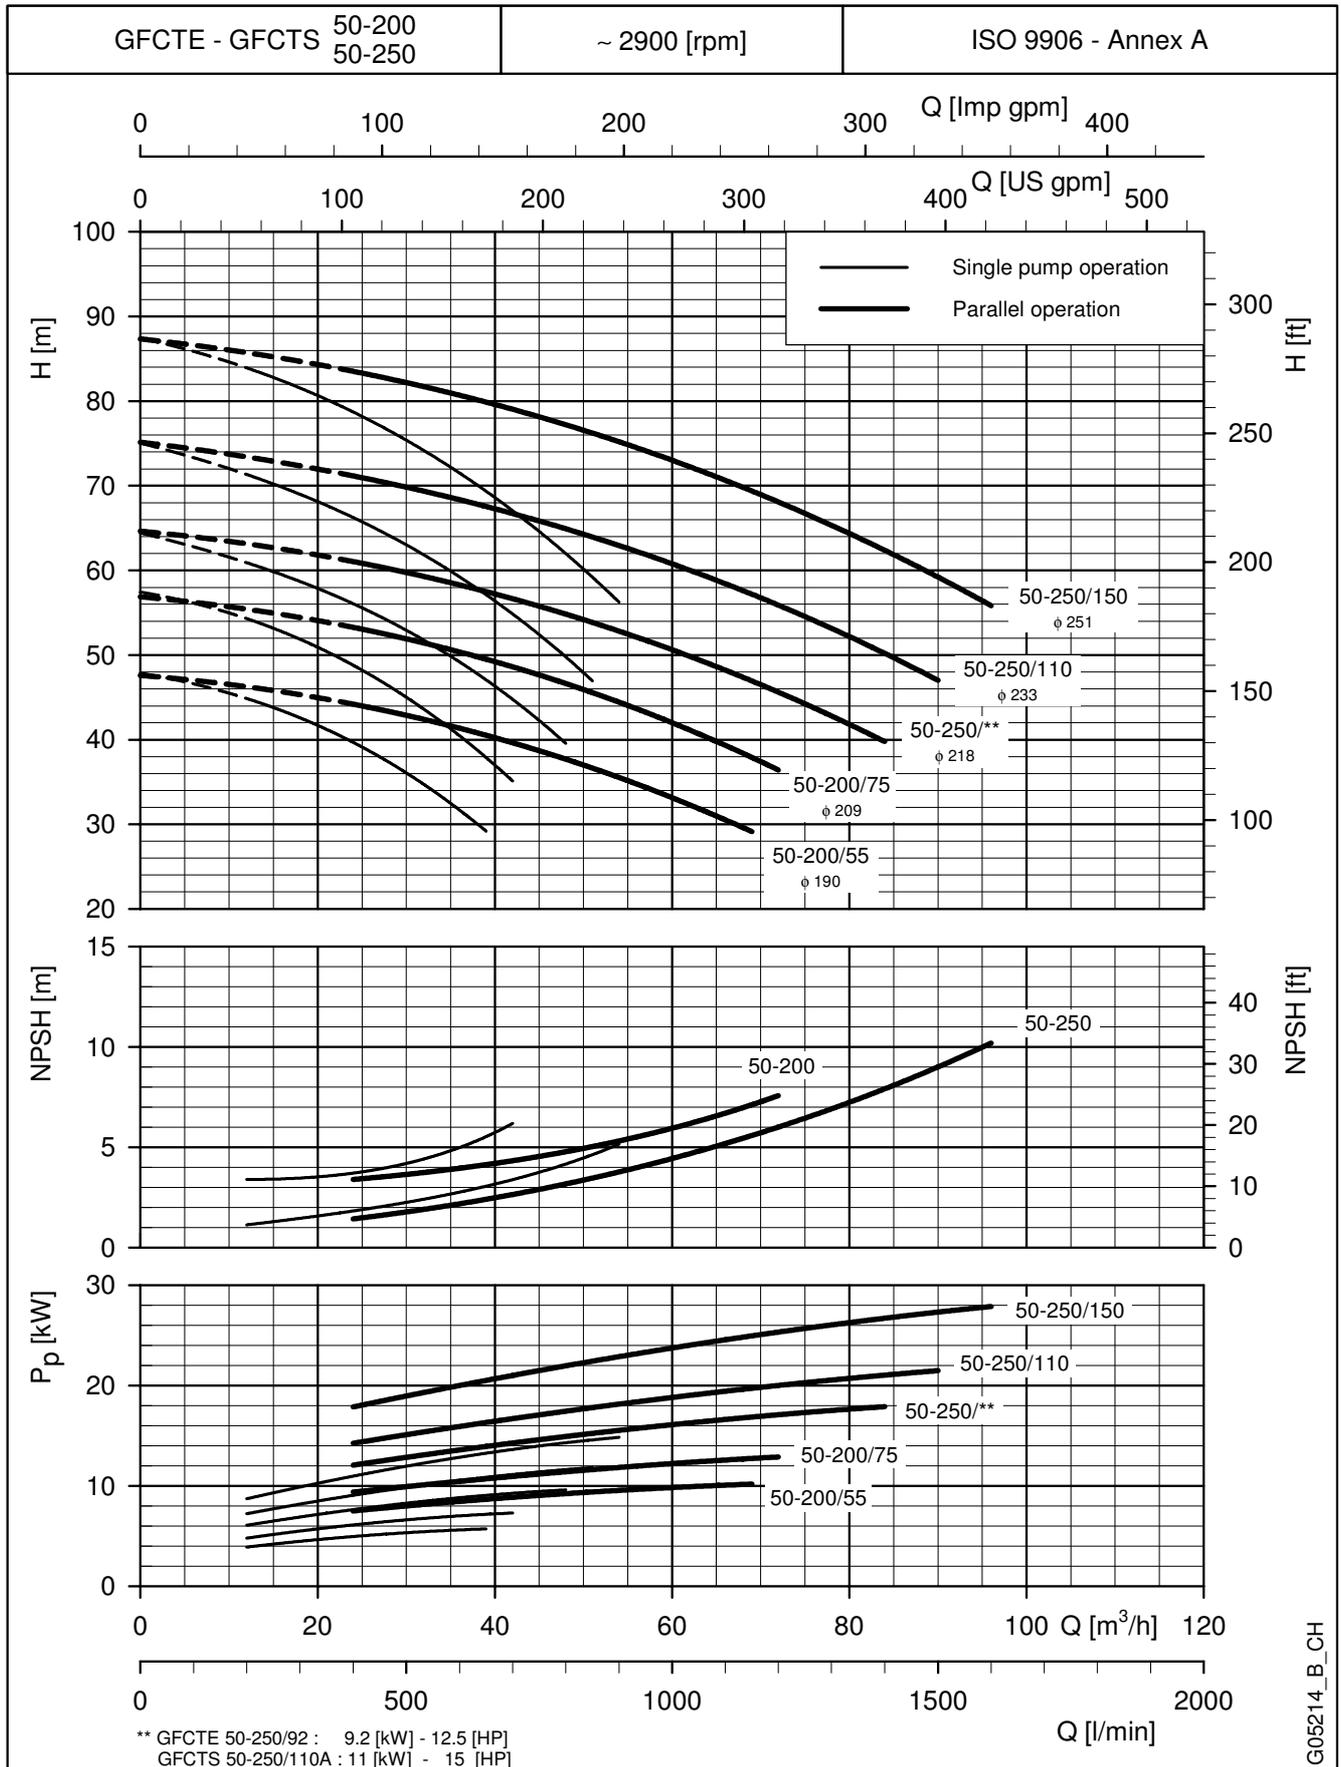

**GFCTE-GFCTS SERIES**  
**OPERATING CHARACTERISTICS AT 50 Hz, 2 POLES**

G05213\_C\_CH

The NPSH values are laboratory values; for practical use we suggest increasing these values by 0,5 m.  
 These performances are valid for liquids with density  $\rho = 1,0 \text{ Kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{sec}$ .

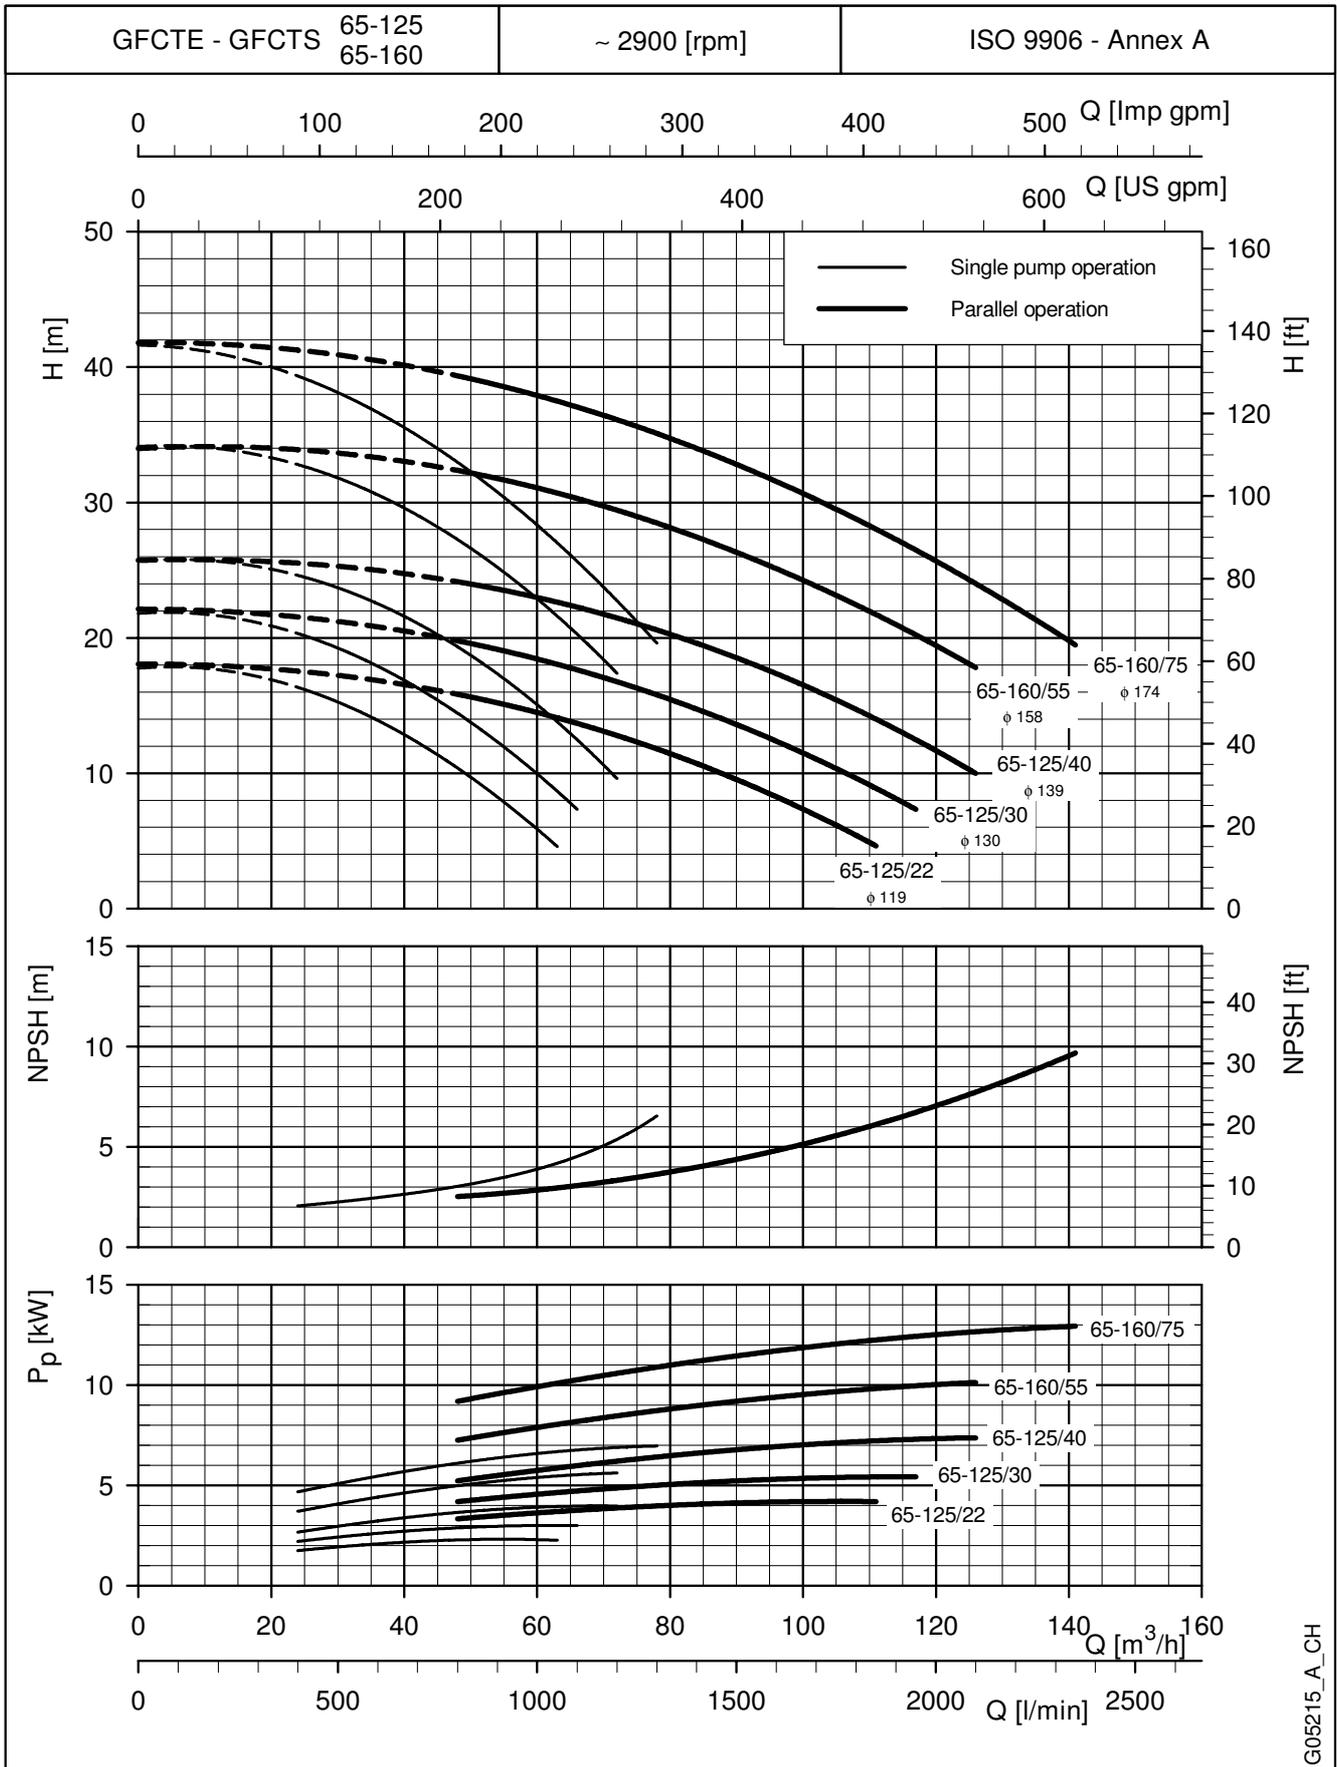

**GFCTE-GFCTS SERIES**  
**OPERATING CHARACTERISTICS AT 50 Hz, 2 POLES**

G05214\_B\_CH

The NPSH values are laboratory values; for practical use we suggest increasing these values by 0,5 m.  
 These performances are valid for liquids with density ρ = 1,0 Kg/dm<sup>3</sup> and kinematic viscosity ν = 1 mm<sup>2</sup>/sec.

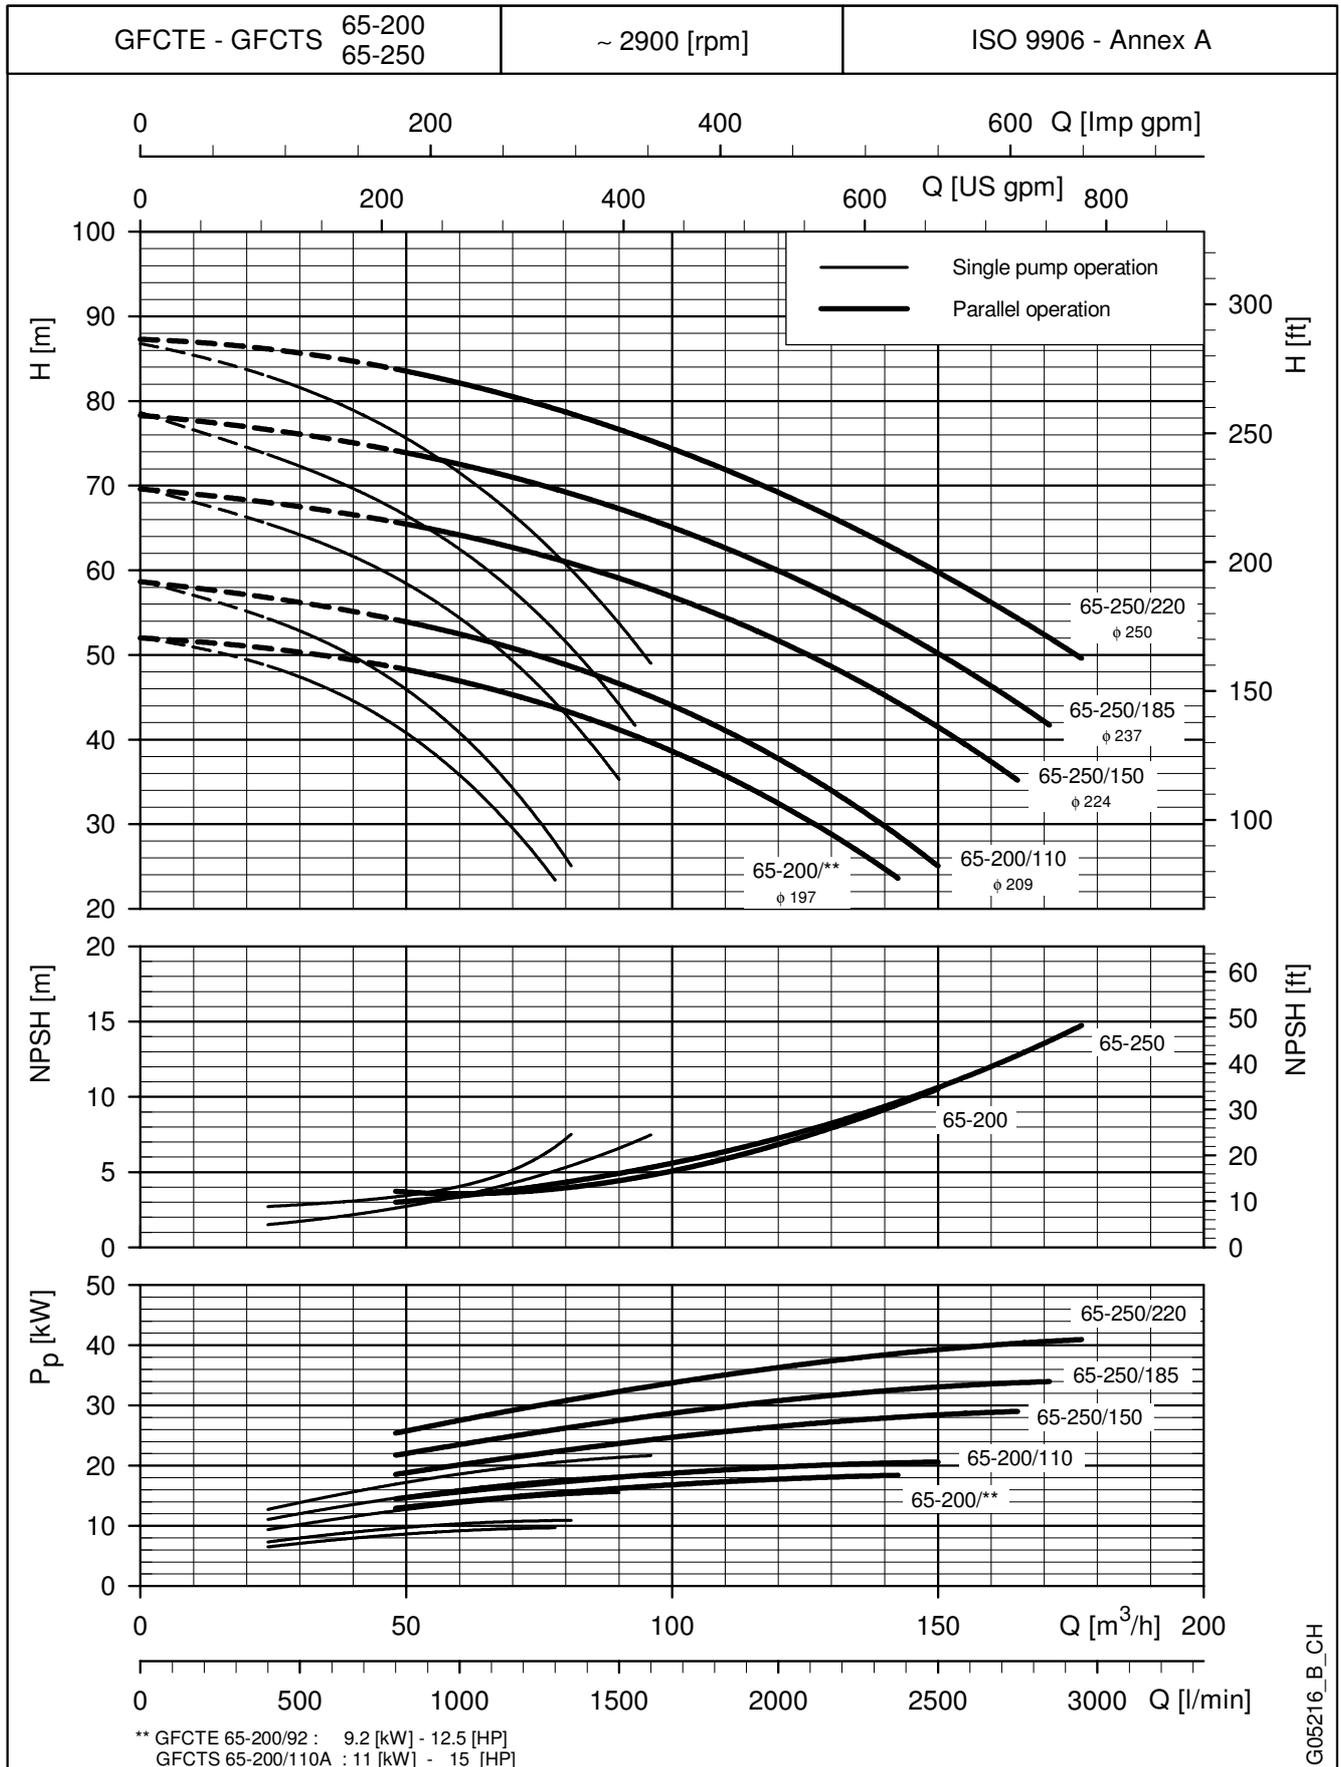

**GFCTE-GFCTS SERIES  
OPERATING CHARACTERISTICS AT 50 Hz, 2 POLES**

G05215\_A\_CH

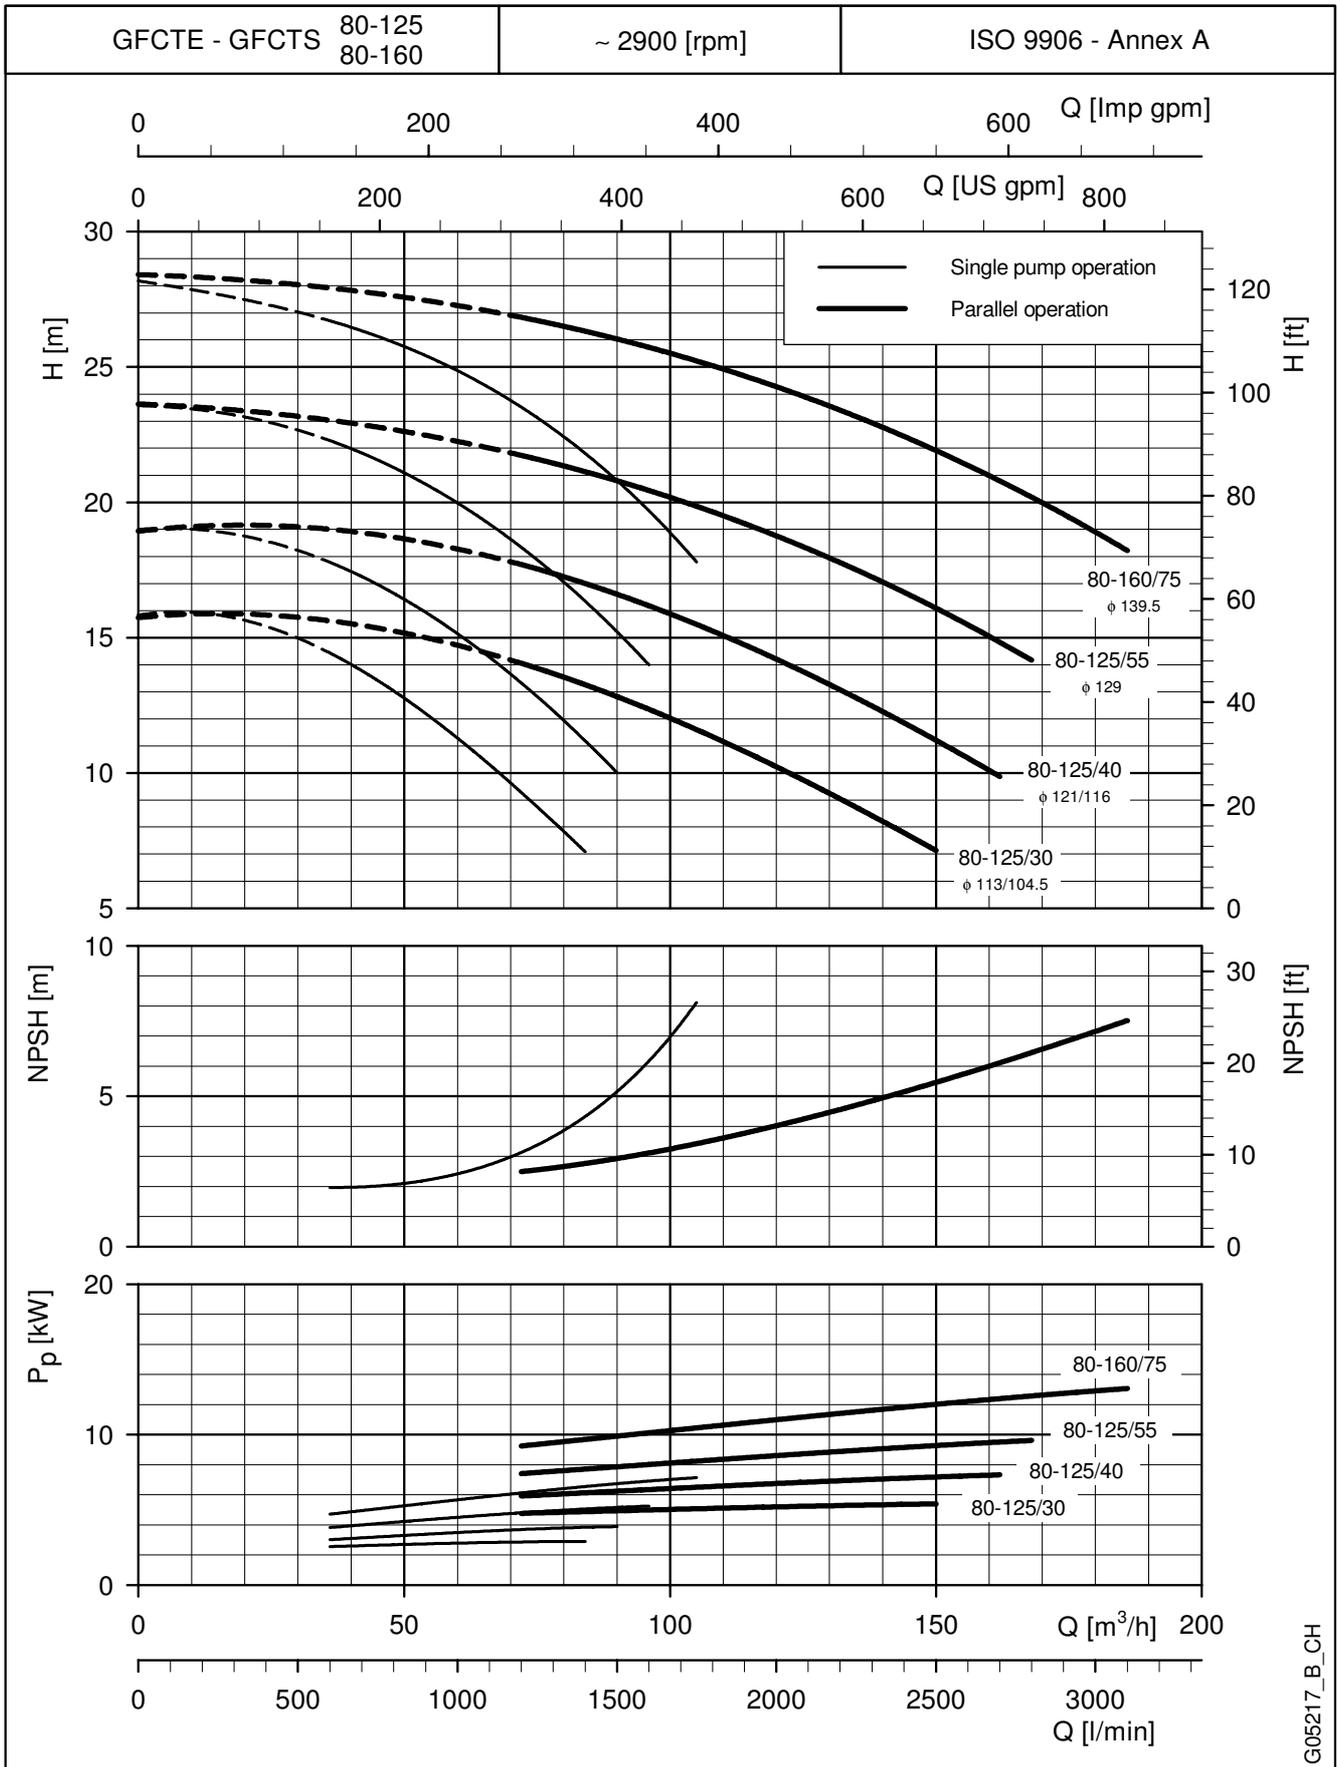

The NPSH values are laboratory values; for practical use we suggest increasing these values by 0,5 m.  
These performances are valid for liquids with density  $\rho = 1,0 \text{ Kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{sec}$ .

**GFCTE-GFCTS SERIES**

## **TYPICAL APPLICATIONS OF GFC, GFCT SERIES ELECTRIC PUMPS:**

### *Heating, Ventilating &*

#### *Air Conditioning (HVAC):*

Condensate return  
Air scrubbers  
Water re-circulation  
Cooling towers  
Cooling systems  
Temperature control  
Chillers  
Induction heating  
Heat exchangers  
Water heating  
Booster packagers

### *Graphics:*

Film washing  
Cooling of presses

### *Waste Management:*

Waste treatment  
Pollution control

### *Agriculture:*

Irrigation  
Greenhouses  
Cotton humidifiers

### *Laundry:*

Commercial washing

## NPSH

The minimum operating values that can be reached at the pump suction end are limited by the onset of cavitation.

Cavitation is the formation of vapour-filled cavities within liquids where the pressure is locally reduced to a critical value, or where the local pressure is equal to, or just below the vapour pressure of the liquid.

The vapour-filled cavities flow with the current and when they reach a higher pressure area the vapour contained in the cavities condenses. The cavities collide, generating pressure waves that are transmitted to the walls. These, being subjected to stress cycles, gradually become deformed and yield due to fatigue. This phenomenon, characterized by a metallic noise produced by the hammering on the pipe walls, is called incipient cavitation.

The damage caused by cavitation may be magnified by electrochemical corrosion and a local rise in temperature due to the plastic deformation of the walls. The materials that offer the highest resistance to heat and corrosion are alloy steels, especially austenitic steel. The conditions that trigger cavitation may be assessed by calculating the total net suction head, referred to in technical literature with the acronym NPSH (Net Positive Suction Head).

The NPSH represents the total energy (expressed in m.) of the liquid measured at suction under conditions of incipient cavitation, excluding the vapour pressure (expressed in m.) that the liquid has at the pump inlet.

To find the static height  $h_z$  at which to install the machine under safe conditions, the following formula must be verified:

$$h_p + h_z \geq (\text{NPSH}_r + 0.5) + h_f + h_{pv} \quad (1)$$

where:

- h<sub>p</sub>** is the absolute pressure applied to the free liquid surface in the suction tank, expressed in m. of liquid;  $h_p$  is the quotient between the barometric pressure and the specific weight of the liquid.
- h<sub>z</sub>** is the suction lift between the pump axis and the free liquid surface in the suction tank, expressed in m.;  $h_z$  is negative when the liquid level is lower than the pump axis.
- h<sub>f</sub>** is the flow resistance in the suction line and its accessories, such as: fittings, foot valve, gate valve, elbows, etc.
- h<sub>pv</sub>** is the vapour pressure of the liquid at the operating temperature, expressed in m. of liquid.  $h_{pv}$  is the quotient between the  $P_v$  vapour pressure and the liquid's specific weight.
- 0,5** is the safety factor.

The maximum possible suction head for installation depends on the value of the atmospheric pressure (i.e. the elevation above sea level at which the pump is installed) and the temperature of the liquid.

To help the user, with reference to water temperature (4° C) and to the elevation above sea level, the following tables show the drop in hydraulic pressure head in relation to the elevation above sea level, and the suction loss in relation to temperature.

Water temperature (°C)	20	40	60	80	90	110	120
Suction loss (m)	0,2	0,7	2,0	5,0	7,4	15,4	21,5

Elevation above sea level (m)	500	1000	1500	2000	2500	3000
Suction loss (m)	0,55	1,1	1,65	2,2	2,75	3,3

Friction loss is shown in the tables at pages 127-128 of this catalogue. To reduce it to a minimum, especially in cases of high suction head (over 4-5 m.) or within the operating limits with high flow rates, we recommend using a suction line having a larger diameter than that of the pump's suction port. It is always a good idea to position the pump as close as possible to the liquid to be pumped.

Make the following calculation:

Liquid: water at ~15°C  $\gamma = 1 \text{ kg/dm}^3$

Flow rate required: 30 m<sup>3</sup>/h

Head for required delivery: 43 m.

Suction lift: 3,5 m.

The selection is an GFHE 40-200/75 pump whose NPSH required value is, at 30 m<sup>3</sup>/h, di 2,5 m.

For water at 15 °C

$$h_p = P_a / \gamma = 10,33\text{m}, h_{pv} = P_v / \gamma = 0,174\text{m} (0,01701 \text{ bar})$$

The  $H_f$  flow resistance in the suction line with foot valves is ~ 1,2 m.

By substituting the parameters in formula (1) with the numeric values above, we have:

$$10,33 + (-3,5) \geq (2,5 + 0,5) + 1,2 + 0,17$$

from which we have: 6,8 > 4,4

The relation is therefore verified.

G-at-pct\_a\_th

hr = flow resistance for 100m of straight pipeline (m)  
V = water speed (m/s)

## FLOW RESISTANCE

### TABLE OF FLOW RESISTANCE IN BENDS, VALVES AND GATES

The flow resistance is calculated using the equivalent pipeline length method according to the table below:

ACCESSORY TYPE	DN											
	25	32	40	50	65	80	100	125	150	200	250	300
	Equivalent pipeline length (m)											
45° bend	0,2	0,2	0,4	0,4	0,6	0,6	0,9	1,1	1,5	1,9	2,4	2,8
90° bend	0,4	0,6	0,9	1,1	1,3	1,5	2,1	2,6	3,0	3,9	4,7	5,8
90° smooth bend	0,4	0,4	0,4	0,6	0,9	1,1	1,3	1,7	1,9	2,8	3,4	3,9
Union tee or cross	1,1	1,3	1,7	2,1	2,6	3,2	4,3	5,3	6,4	7,5	10,7	12,8
Gate	-	-	-	0,2	0,2	0,2	0,4	0,4	0,6	0,9	1,1	1,3
Non return valve	1,1	1,5	1,9	2,4	3,0	3,4	4,7	5,9	7,4	9,6	11,8	13,9

G-a-pcv\_a\_th

The table is valid for the Hazen Williams coefficient  $C = 100$  (cast iron pipework). For steel pipework, multiply the values by 1.41. For stainless steel, copper and coated cast iron pipework, multiply the values by 1.85.

When the **equivalent pipeline length** has been determined, the flow resistance is obtained from the table of flow resistance.

The values given are guideline values which are bound to vary slightly according to the model, especially for gate valves and non-return valves, for which it is a good idea to check the values supplied by the manufacturers.

# Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're 12,000 people unified in a common purpose: creating innovative solutions to meet our world's water needs. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. We move, treat, analyze, and return water to the environment, and we help people use water efficiently, in their homes, buildings, factories and farms. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise, backed by a legacy of innovation.
