

# ACCURATE

Close control air conditioning

 CLIMVENETA

# Marketing features

The new high-efficiency air conditioner ACCURATE adds the finishing touch to the already prominent presence on the world industrial air-conditioning scenario. It has been designed to satisfy the conditioning requirements of technological rooms, offering features that make it suitable for all the various applications in daily use and from which we demand utmost reliability.

## CENTRALLY CONTROLLED SYSTEMS

- Banks
- Hotel
- Airports
- Retail and distribution industry
- Museums and Libraries
- Medium/large companies

## KEY CUSTOMERS

- Railways and motorways
- Internet providers
- Armed Forces

# Global efficiency

Close air-conditioning means not only compliance with the severest environmental parameters but also with the specific requirements of the site, such as EFFICIENCY, FLEXIBILITY, OPERATING RELIABILITY AND RESPECT FOR THE ENVIRONMENT, which today's products must satisfy. ACCURATE has been created to meet all these requirements, exploiting the renowned capacity to supply total quality air-conditioning systems

## EFFICIENCY MOST OF ALL

Nowadays efficiency is no longer considered as just energy saving in respect of the single unit, but takes into account both the PERFORMANCE of the whole system and its COMPLETE RELIABILITY and MODULARITY over the years.

In offering ACCURATE as a solution to technological cooling problems, we have been concentrated on the use of known quality parts and integration with BMS (building management systems).

### Standard solutions

- SCROLL compressors
- Thermostat valve with internal pressure equalisation
- Electronic thermostat (optional)
- Standard centrifugal fans
- High efficiency EC INVERTER ventilation (optional)
- Standard condensation control (DX versions)
- Electric reheat or with hot water
- Immersed electrode humidifying system
- Intelligent dehumidifying system with constant airflow
- Semi-graphic control display
- Connection to traditional BMS

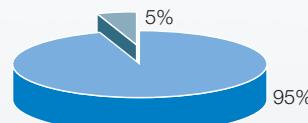

## COOLING? SENSIBLE!

As is known, electronic equipment develops solely SENSIBLE heat loads and therefore needs dedicated air conditioning to deal with this.

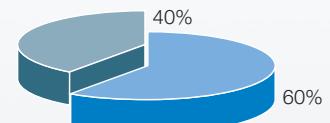

That is why ACCURATE has been made; to ensure maximum SENSIBLE cooling capacity to the detriment of the LATENT capacity, which would be a sheer waste of energy in these applications.

This is of basic importance for transforming all the supplied energy into a real room temperature control.

The result is a high SHR, minimum of 0.9 and a maximum of 1, in order to have the utmost SENSIBLE and not latent type of cooling.

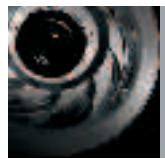

SHR for TECHNOLOGICAL application

SHR for COMFORT application

Outstanding performances

## EC INVERTER FANS

This new technology with electronically commutated motor increases the efficiency of the ACCURATE system, optimising running costs through state-of-the-art electronics, which are used to change parameters such as:

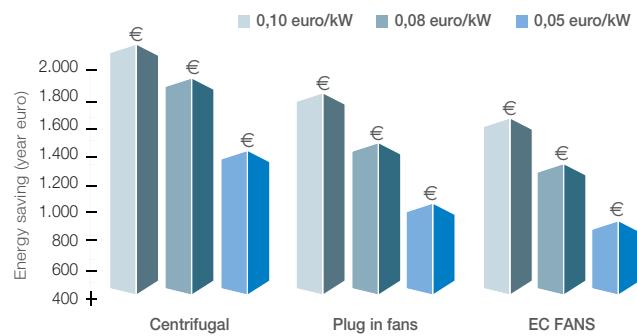

- flow rate
- cooling capacity
- external pressure
- noise leve

thereby guaranteeing best operation of the system at any moment, and in particular:

- 1 Continuous adjustment of the quantity of air
- 2 Intelligent and low-noise system of air conveyance throughout the whole appliance
- 3 Up to 45% saving in the chilled water units

## EC INVERTER FANS TECHNOLOGY

The most advanced solution for energy saving

Energy saving by EC INVERTER Fans Vs. standard traditional fans

## THE SPACE IS ALL FOR YOU

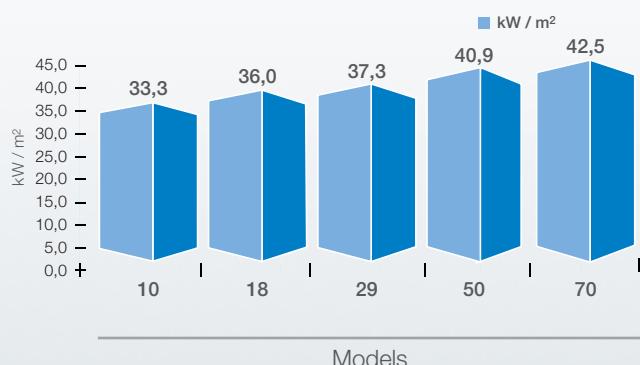

It is a known fact that the set loads (W/m<sup>2</sup>) in technological applications are continuously increasing. This is mainly due to the increase in data traffic, giving rise to new equipment with an increasingly greater capacity of transmission, which in turn develops a higher heat load to be dispersed.

This requires ever better performance from the air-conditioning system that should, however, take up as little space as possible, leaving it for the transmission equipment.

ACCURATE is the air-conditioner with the best SUPPLIED POWER / FOOT PRINT ratio in the market. Because space means value.

## DIRECT EXPANSION RANGE

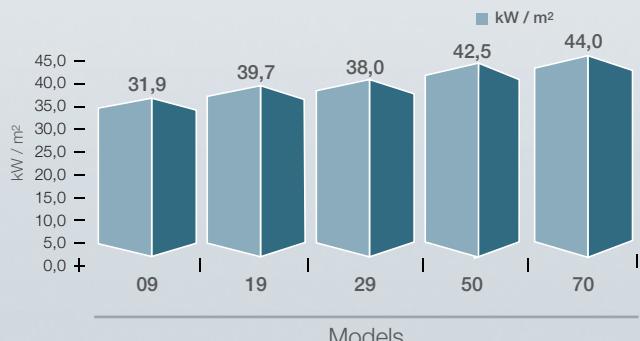

Cooling Capacity (kW)

Models

## CHILLED WATER RANGE

Cooling Capacity (kW)

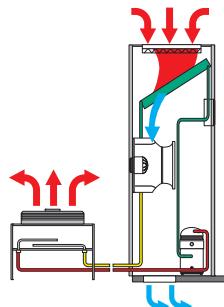

Models

# Total versatility

All-round flexibility seen as a service offered for any type of system. ACCURATE comes with capacities from 7 to 100 kW in the direct expansion version with air cooling (AXO-AXU) and water cooling (AWO-AWU), from 7 to 221 kW in the

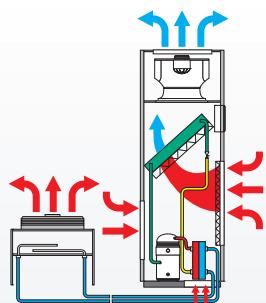

## TYPES OF COOLING

### AXO/AXU DIRECT EXPANSION AIR COOLED

Refrigerant for heat transfer is used in these direct expansion units. The air in the room is therefore treated in the evaporating coil containing the refrigerant.

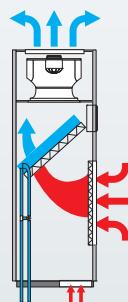

The condensation heat is dispersed to a fresh air condenser that comes in the standard supply with speed control to optimise the condensation pressure even in adverse temperature conditions.

### AWO/AWU DIRECT EXPANSION WATER COOLED

Refrigerant for heat transfer is used in these direct expansion units. The air in the room is therefore treated in the evaporating coil containing the refrigerant. The condensation heat is dispersed in an internal plate-type exchanger connected in turn to a water circuit. The water of condensation may come from a well, local water mains or closed circuits such as cooling towers or dry coolers.

NB: for negative External T values antifreeze fluids must be used to protect the system

### ACO/ACU CHILLED WATER

Water coming generally from a chiller is used in these units to transfer the heat.

The flow of liquid through the unit water coil is controlled through an internal 2 or 3-way valve.

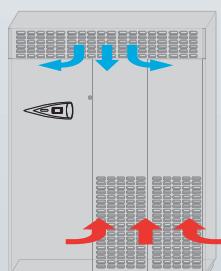

NB: for negative External T values antifreeze fluids must be used to protect the system

## AIRFLOW CONFIGURATION

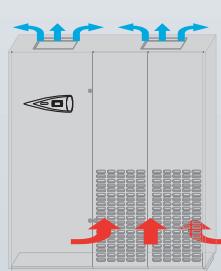

### OVER

The versions called OVER with air outflow from the top generally have the air intake at the front, rear or bottom of the unit, according to customer choice, and the outflow from the top is along ducts behind suspended ceilings or front delivery plenums.

OVER unit with front intake and delivery plenum

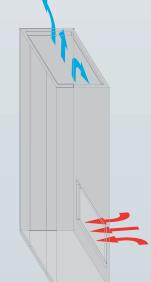

OVER unit with front intake and top delivery

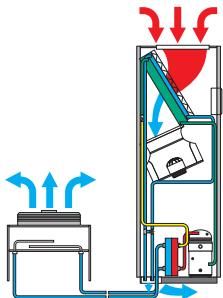

OVER unit with underfloor intake and top delivery

OVER unit with rear intake and top delivery

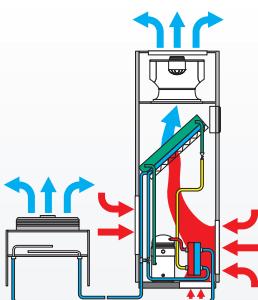

chilled water version (ACO-ACU) to be connected to chillers and from 20 to 145 kW in version dual fluid (ADO-ADU / ATO-ATU), free cooling (AFO-AFU) and dual coil (ABO-ABU).

#### **ADO/ADU & ATO/ATU DUAL FLUID**

These units are per standard provided with a dual cooling systems who never work simultaneously. A PRIMARY circuit, made by a chilled water circuit (CW) generally connected to an external chiller, plus a SECONDARY circuit in direct expansion (DX) who is considered as BACK-UP. Such units are particularly indicated anywhere RELIABILITY, SAFETY and REDUNDANCY are required.

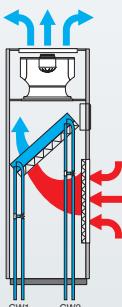

Units provided per standard with EC inverter fans who represents today the best solution for energy saving.

#### **AFO/AFU FREE COOLING**

These units are per standard provided with a dual cooling systems who are often working simultaneously along the year. A PRIMARY direct expansion circuit (DX) plus a SECONDARY chilled water circuit (CW) generally connected to an external dry cooler who is considered as "support" to the primary one. Such units are particularly indicated anywhere EFFICIENCY & ENERGY SAVING are required.

Units provided per standard with EC inverter fans who represents today the best solution for energy saving.

#### **ABO/ABU DUAL COIL**

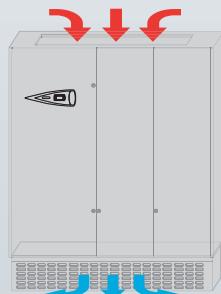

These units are per standard provided with a double chilled water circuit inside, who never work simultaneously. Such circuits are connected to independent water circuit in order to be one in BACK-UP to the other. Such units are particularly indicated anywhere RELIABILITY, SAFETY and REDUNDANCY are required.

Units provided per standard with EC inverter fans who represents today the best solution for energy saving.

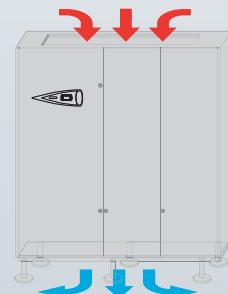

#### **UNDER**

The versions called UNDER with air outflow under the floor have the air intake on the top of the unit taking air directly from the environment or through intake ducts or plenums.

UNDER unit with top intake and front delivery plenum

OVER unit with top intake and undefloor delivery

# Intelligent control

## Intelligent heart and soul

ACCURATE has an intelligent electronic heart that allows it to keep a constant control over all the operating and environmental parameters of the site. The ACCURATE electronic unit is open and configurable to specific user requirements both in site and particularly in the factory with dedicated customisation.

## ELECTRONICS

### STANDARD FUNCTIONS

- Semi-graphic display 132 x 64 pixel
- Programmable software
- ICONS Graphic Display
- Record storage of 100 alarms
- General alarm
- Automatic reset after blackout
- Compressor FIFO management
- Integral LAN system
- Standby management
- Automatic rotation
- Serious alarms
- Operating contemporaneousness

### MAIN OPTIONS

- Serial cards for BMS interconnection
- Clock card
- Fire-smoke alarms
- Flooding alarm
- Electronic thermostat control
- Flow rate modulation
- Emergency function
- Free Cooling, Dual Fluid and Dual Coil management

## OPTIONS AND MAIN ACCESSORIES

### STANDARD

#### Structure

- Multi-speed centrifugal fans
- High efficiency Copeland Scroll compressors
- High and low side pressure switches
- Filters EU2 - EU4
- R-407C - R-410A Refrigerant
- 3-way valves (CW)

#### Electronic unit

- Semi-graphic display 132 x 64pixel
- LAN, integral Local Area Network
- Buffer battery
- Record 100 alarms

### OPTIONALS

#### Structure

- EC INVERTER RADIAL-BLADE fans
- Immersed electrode humidifiers
- Electric reheat and hot water
- Intelligent dehumidifying with constant air flow
- FILTER F5-F6-F7-F8 (built into the structure)
- Air distribution plenum with grilles
- Soundproofed plenum
- CLASS 0 insulating panels
- Electronic thermostat
- Condensing control

#### Electronic unit

- Serial cards for BMS interfacing
- DC INVERTER FAN control software
- Driver for electronic thermostat control

# Total compatibility

## ACCURATE IS TOTAL COMMUNICATION

In a policy of "total communication" ACCURATE offers various solutions for interconnection to the most modern BMSs, aimed at satisfying varying needs.

### GLOBAL SUPERVISION

firmware protocol for total management of all the air-conditioning parameters, including:

- Detection and transmission of alarms from remote
- Change of data from remote
- Recording of data and alarms
- Sending of SMS via GSM modem

all through dedicated serial cards and supervision systems both in LOCAL and REMOTE mode.

### ADVANCED SUPERVISION

solutions of compatibility for all the most common BMSs available on the market today, such as:

- MODBUS
- METASYS
- LON
- TREND
- LONWORKS
- SNMP/TCP/IP

to satisfy every single customer requirement and to offer the possibility of communicating with the global network.

## RESPECT FOR THE ENVIRONMENT

ACCURATE is totally in line with the known policy of full respect for the environment in which we live and for human health and safety. The use of recyclable materials and eco-compatible refrigerants (R407C - R410A) to current standards and legislation, make ACCURATE a state-of-the-art product in this sense.

### NOISELESS COLD

Modern telephone applications in residential areas must satisfy increasingly severer requirements in terms of noise pollution. ACCURATE then propose a large range to satify such requests, often customized base on customer requests and site conditions.

Main systems are:

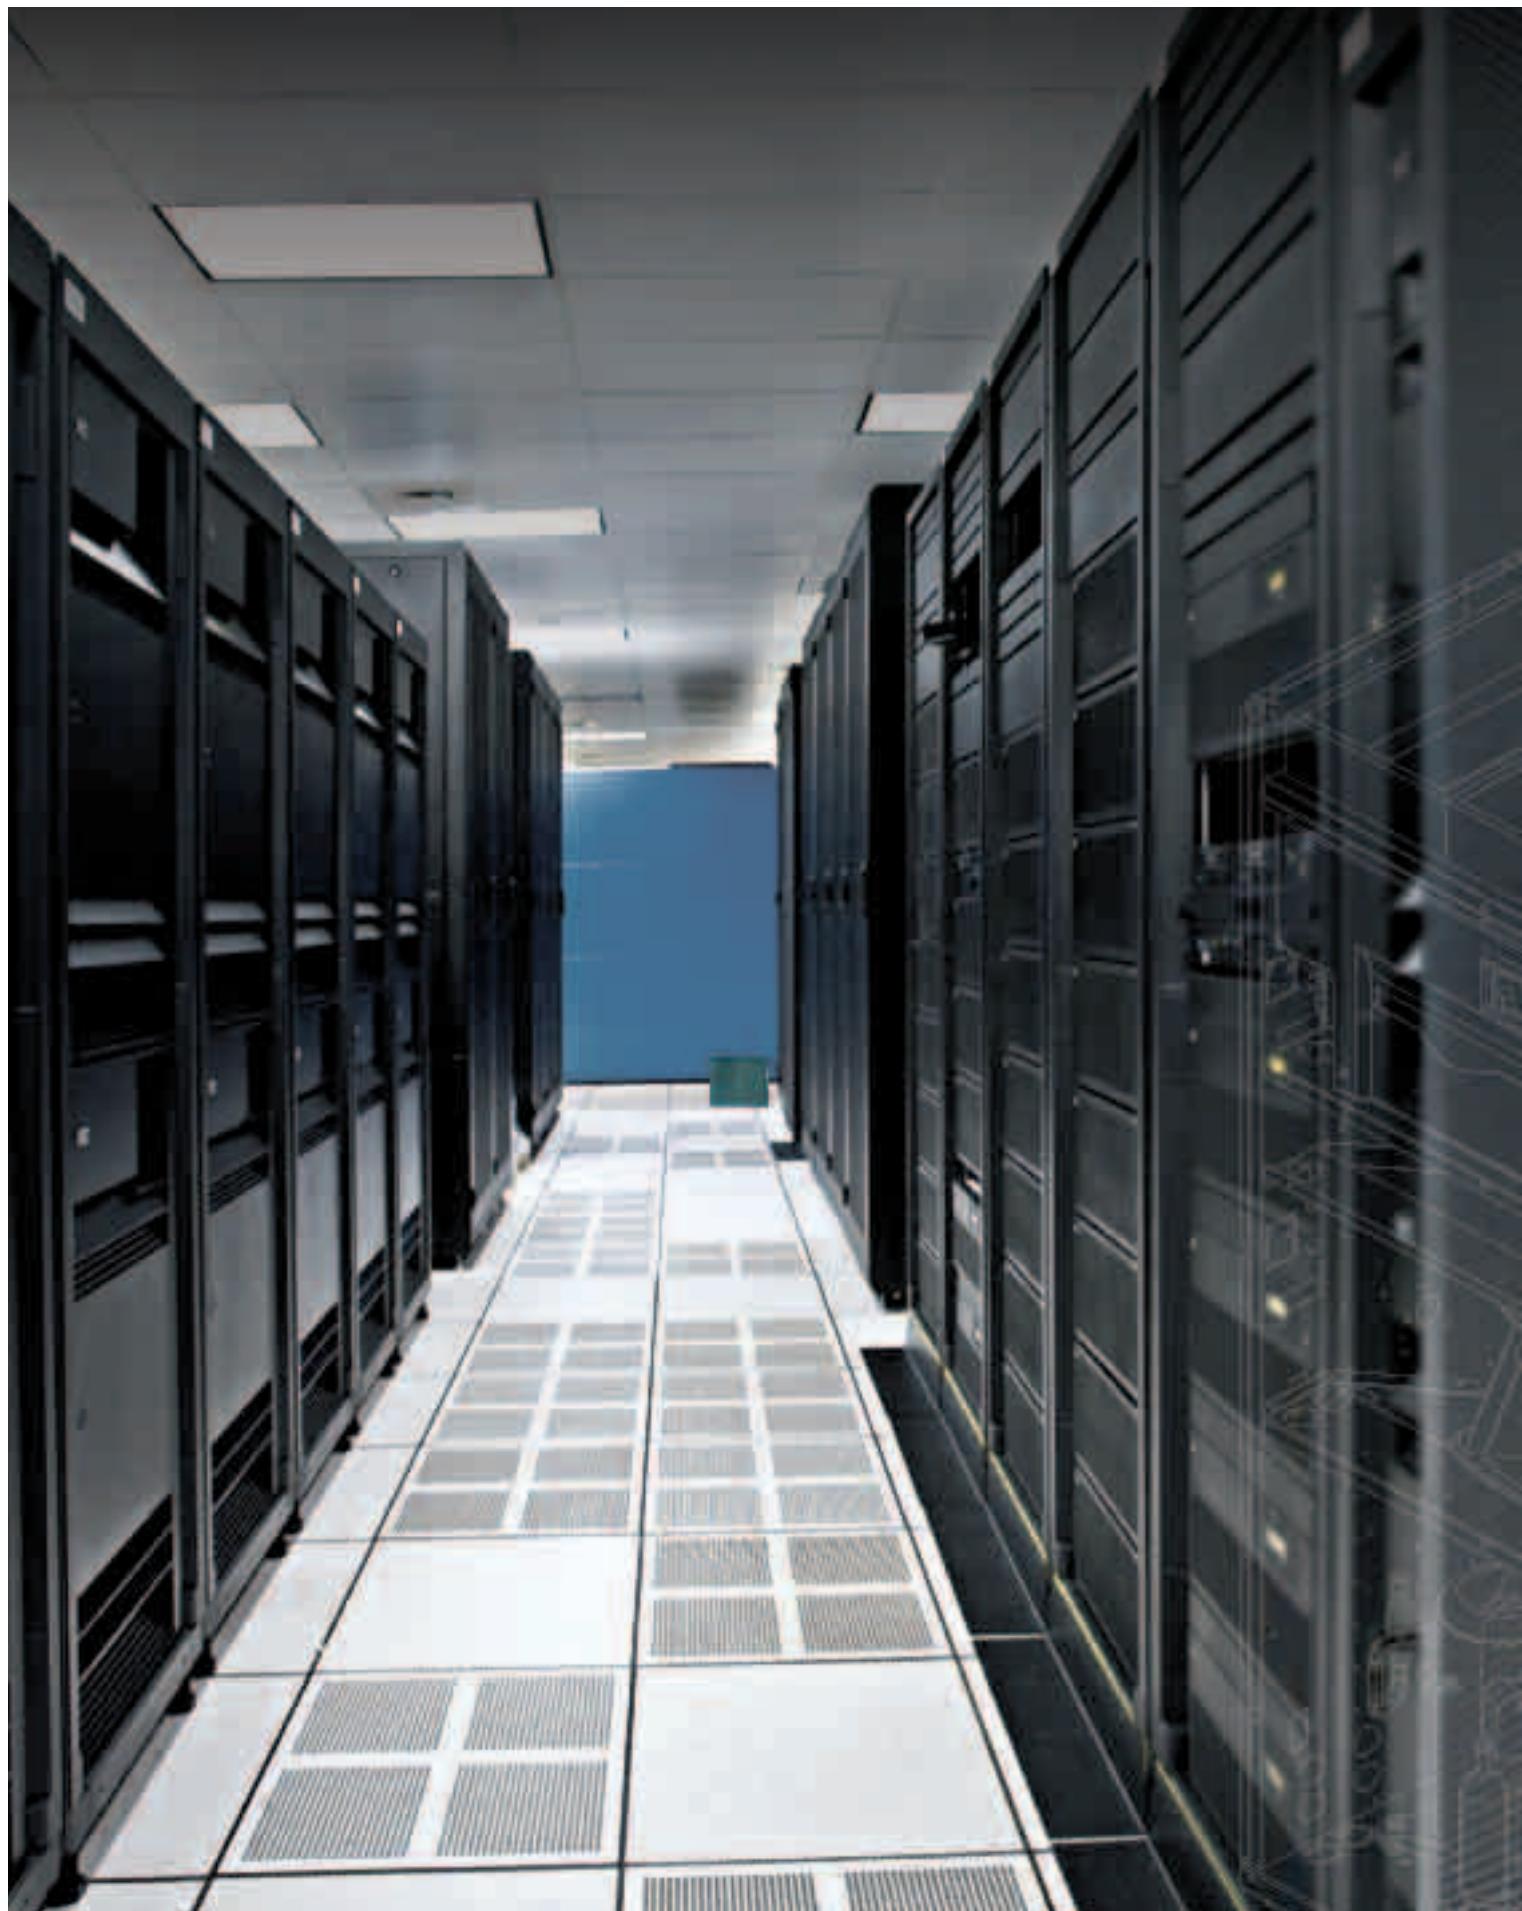

- Centrifugal fans (STD)
- EC INVERTER FANS (OPT) with air flow modulation capability
- Soundproofed compressors (OPT)
- Panelling clad in soundproofing material (STD)

### MAINTENANCE

The design of the new ACCURATE models was based on the need to simplify routine and extraordinary maintenance work carried out during the lifetime of the product. The refrigerant circuit area is completely separate from the fan area, thereby allowing routine maintenance to be carried out also with the unit in operation.

All servicing operations, even the most critical ones, can be accomplished by a full front access. That is why all the front panels are openable and can even be removed thanks to simple hinges.

## Technical features

#### TECHNICAL FEATURES

- AXO / AXU
- AWO / AWU
- ACO / ACU
- ADO / ADU
- ATO / ATU
- AFO / AFU
- ABO / ABU
- BRC / BRE / BDC

## TECHNICAL FEATURES

# AXO / AXU 07÷90

## AXO / AXU

Close control air conditioner

Type: DIRECT EXPANSION, AIR COOLED,  
upflow or downflow version

### Evolution

### Available Versions

- STD** Cooling only without condensation control device
- MOD** Cooling only with condensation control device through external unit fans regulation
- LT** Low temperatures version (-45°C) with condensation control device through external unit speed regulation.

### UNIT DESCRIPTION

Ductable close control air-conditioners with capacities ranging from 7 to 90 kW for vertical installation and cooling only, with optional heating by means of heating element or hot water, optional humidifier and dehumidifier for precise temperature and humidity control. Particularly suitable for air-conditioning technological, server and CED rooms and all technological applications in general.  
Units fitted with centrifugal fans with airflow from the top & from bottom.  
External air condenser.  
Power supply 400/3N/50 (all models).

### STANDARD UNIT COMPOSITION

- Unit for installing inside or outside the room to be air-conditioned.
- Maximum resistance to rust thanks to galvanised sheet metal structures and panels with powder-coated paint finish.  
The panels are lined with sound-insulating material.
- The reliability and functionality of the compressor and all the other components are guaranteed by partners who are world leaders in their sector.
- Double-inlet centrifugal fan units, directly coupled and suspended on vibration-isolation mountings.  
The fans are of the forward-bladed type for maximum efficiency and low noise.
- Condensation control for maximum low noise (standard).

- Standard G4 filtering section, F5-F8 optional, under CEN-EN 779 rule with the separation degree 90,1% ASHRAE. The filter is autoextinguishing type.
- The microprocessor controls the compressor activation times with FIFO logic, thereby regulating the cooling capacity; it also controls the operating alarms with the possibility of interfacing to supervisor and remote-servicing systems.
- Electrical box under IEC 204-1/EN60204-1 rules.
- Refrigerant circuit consisting in the standard version of a thermostat with external valve for internal pressure relief, solenoid valve, high/low pressure safety pressure switch, liquid indicator light and dehydrating filter.

## TECHNICAL FEATURES

# ACO / ACU 07÷221

### ACO / ACU

Close control air conditioner

Type: CHILLED WATER,  
upflow or downflow version

Evolution

### Available Versions

**STD** Cooling only,  
with 3 way valve

## UNIT DESCRIPTION

Ductable close control air-conditioners with capacities ranging from 7 to 221 kW for vertical installation and cooling only, with optional heating by means of heating element or hot water, optional humidifier and dehumidifier for precise temperature and humidity control.

Particularly suitable for air-conditioning technological, server and CED rooms and all technological applications in general.  
Units fitted with centrifugal fans with airflow from the top & from bottom.

Unit has to be connected to an external chiller.

## STANDARD UNIT COMPOSITION

- Unit for installing inside or outside the room to be air-conditioned.
- Maximum resistance to rust thanks to galvanised sheet metal structures and panels with powder-coated paint finish. The panels are lined with sound-insulating material.
- The reliability of all the components is guaranteed by partners who are world leaders in their sector.
- Double-inlet centrifugal fan units, directly coupled and suspended on vibration-isolation mountings. The fans are of the forward-bladed type for maximum efficiency and low noise.
- Standard G4 filtering section, F5-F8 optional, under CEN-EN 779 rule with the separation degree 90,1% ASHRAE. The filter is autoextinguishing type.
- The microprocessor controls all the main functions of the air conditioners; it also controls the operating alarms with the possibility of interfacing to supervisor and remote-servicing systems.
- Electrical box under IEC 204-1/EN60204-1 rules.
- Capillary Pre and After sales service.

### ADO / ADU

Close control air conditioner

Type: DUAL FLUID, AIR COOLED,  
upflow or downflow version

#### Evolution

#### Available Versions

- |            |   |
|------------|---|
| <b>STD</b> | Cooling only without condensation control device  |
| <b>MOD</b> | Cooling only with condensation control device through external unit fans regulation                       |
| <b>LT</b>  | Low temperatures version (-45°C) with condensation control device through external unit speed regulation. |

### UNIT DESCRIPTION

Ductable close control units air-conditioners with capacity ranging from 20 to 90 kW for vertical installation and cooling only, with optional heating by means of heating elements and hot water, optional humidifier and dehumidifier for precise temperature and humidity control.

Particularly suitable for air conditioning technological, servers and IT rooms and all technological applications in general.

Units fitted with EC INVERTER fans, upflow or downflow.

Units have to be connected to an external chiller for PRIMARY circuit instead to an air cooled condenser for the SECONDARY circuit (BACK-UP circuit).

### STANDARD UNIT COMPOSITION

- Unit for installing inside or outside the room to be air-conditioned.
- Maximum resistance to rust thanks to galvanised sheet metal structures and panels with powder-coated paint finish. The panels are lined with sound-insulating material.
- The reliability of all the components is guaranteed by partners who are world leaders in their sector.
- NEW EC INVERTER fans with electronic commutation in order to maximize the energy saving and reducing the noise emissions.
- Standard G4 filtering section, F5-F8 optional, under CEN-EN 779 rule with the separation degree 90,1% ASHRAE. The filter is autoextinguishing type.
- The microprocessor controls all the main functions of the air conditioners; it also controls the operating alarms with the possibility of interfacing to supervisor and remote-servicing systems.
- Electrical box under IEC 204-1/EN60204-1 rules.

- Interface electronic board

## TECHNICAL FEATURES

# AFO / AFU 20÷90

### AFO / AFU

Close control air conditioner

Type: FREECOOLING, WATER COOLED,  
upflow or downflow version

Evolution

#### Available Versions

**STD** Cooling only with condensation control device through flooding valve

**MOD\_A** Cooling only with condensation control device through flooding valve and speed regulator for external unit

### UNIT DESCRIPTION

Ductable close control units air-conditioners with capacity ranging from 20 to 90 kW for vertical installation and cooling only, with optional heating by means of heating elements and hot water, optional humidifier and dehumidifier for precise temperature and humidity control.

Particularly suitable for air conditioning technological, servers and IT rooms and all technological applications in general.

Units fitted with EC INVERTER fans, upflow or downflow.

Units has to be connected to an external chiller or dry cooler

### STANDARD UNIT COMPOSITION

- Unit for installing inside or outside the room to be air-conditioned.
- Maximum resistance to rust thanks to galvanised sheet metal structures and panels with powder-coated paint finish. The panels are lined with sound-insulating material.
- The reliability of all the components is guaranteed by partners who are world leaders in their sector.
- NEW EC INVERTER fans with electronic commutation in order to maximize the energy saving and reducing the noise emissions.
- Standard G4 filtering section, F5-F8 optional, under CEN-EN 779 rule with the separation degree 90,1% ASHRAE. The filter is autoextinguishing type.
- The microprocessor controls all the main functions of the air conditioners; it also controls the operating alarms with the possibility of interfacing to supervisor and remote-servicing systems.
- Electrical box under IEC 204-1/EN60204-1 rules.

### ABO / ABU

Close control air conditioner

Type: DUAL COIL,  
upflow or downflow version

Evolution

### Available Versions

**STD** Cooling only,  
with 3 way valve

## UNIT DESCRIPTION

Ductable close control units air-conditioners with capacity ranging from 20 to 140 kW for vertical installation and cooling only, with optional heating by means of heating elements and hot water, optional humidifier and dehumidifier for precise temperature and humidity control.

Particularly suitable for air conditioning technological, servers and IT rooms and all technological applications in general.  
Units fitted with EC INVERTER fans, upflow or downflow.

Units has to be connected to 2 completely independent circuits each one in back-up to the other one.

## STANDARD UNIT COMPOSITION

- Unit for installing inside or outside the room to be air-conditioned.
- Maximum resistance to rust thanks to galvanised sheet metal structures and panels with powder-coated paint finish. The panels are lined with sound-insulating material.
- The reliability of all the components is guaranteed by partners who are world leaders in their sector.
- NEW EC INVERTER fans with electronic commutation in order to maximize the energy saving and reducing the noise emissions.
- Standard G4 filtering section, F5-F8 optional, under CEN-EN 779 rule with the separation degree 90,1% ASHRAE. The filter is autoextinguishing type.
- The microprocessor controls all the main functions of the air conditioners; it also controls the operating alarms with the possibility of interfacing to supervisor and remote-servicing systems.
- Electrical box under IEC 204-1/EN60204-1 rules.
