Dagard : 30 years of continuous innovation

We make your project worry free

Thirty years of experience in the field of clean rooms have made of Dagard a key player on the global market. As a financially sound and long term company, Dagard is renowned for its expertise : we have never strayed from our constant fight against contamination. Every project has its own peculiarities and specific requirements have to be met. Our teams and local partners deal with your case in all its specific aspects.

Customer satisfaction first

Customer satisfaction has always been at the heart of our strategy. Our teams provide a full range of services and manage each project from study and design, through manufacturing and installation to maintenance and after-sales. We strive to devise customized solutions, complying with current standards and regulations, whilst meeting client expectations.

Curbing contamination, our major concern

Complying with hygiene and safety constraints

Controlling microbiological contamination, particle introduction and proliferation is vital to progress in biotechnology. To help you create an environment suitable for the development of biotechnology, we at Dagard provide you with the solutions specifically developed to the levels of cleanliness, airtightness and cleanability required.

Custom-made solutions

Our Ultra Clean and Controlled Environment lines meet the needs of biotechnology. They integrate with each other according to your requirements, in compliance with the specificities of your construction project.

Controlled Environment Line

The Controlled Environment line is made up of elements to meet compliance with standard requirements for clean rooms. It offers a very wide scope of layout possibilities together with ease of installation. Its almost flush components ensure easy cleaning.

A simple and effective solution.

Panels

Partitions and ceilings are movable modular monoblock panels of various thicknesses.

A core is injected or bonded between two facings. Depending on use, it can be of insulating polyurethane foam or a high density mineral wool. Different facing are available : powder coated galvanized steel sheet, stainless steel sheet, powder coated aluminium sheet,...

Special purpose panels

Tubes can be incorporated inside the panel for cable raceways.

Hinged doors

Tough and attractive, hinged doors are mounted on almost flush aluminium door frames to fully match the interior wall thickness.

The leaf facings are made of powder-coated steel sheet (a choice of colours). With one or two leaves to match clear opening dimensions, doors can be provided with vision panel, door closer, recessed automatic drop-down bottom seal, panic bar, push plate, pull handle,...

Tight sliding doors

Sliding doors options: one or two leaves, lacquered steel sheet (a choice of colours), high pressure laminated facings (choice of colours) or totally glazed and almost flush frame.

The slide mechanism is clad with a powder-coated, round shaped aluminium hood, easy to clean.

Manual or automatic, it can be fitted with a vision panel and kick plate.

Glazings

Semi flush glazings are assembled in factory or on site with aluminium frame. Two variants are available : one or two almost flush single panes.

The finishing profile is systematically snapped into place on site.

Light fittings

Totally recessed into ceiling panels, light fittings are easily dismantled either from above and below.

Two variants are available : a light fitting with low luminance diffuser or one with white translucent glass.

Finishings

Large finishing accessories : coving sections, skirting, wall protection systems,...

These finishes ensure a good life span for products and compliance with hygiene standards.

Specific products

Door kits for airlocks, glazed half partition, wall access, housings for extinguishers or safety equipment, serving hatches, emergency exit break glass units, furniture for locker rooms.... Consult us !

High Tech Line

The High Tech line is ideal for working environments in the electronics and similar industries. Materials used have special surface characteristics preventing static electricity discharges from damaging components. Enclosure extensions are facilitated by panels which are light, tough and individually dismountable.

Modularity and specificity: specially designed for electronics environments

Panels

Partition walls are made up of removable, modular monoblock panels. A honeycombed aluminium core is set between two steel sheets. Different facing are available : powder coated galvanized steel sheet, powder coated aluminium sheet,...

Panels can be individually removed and interchanged, even in the middle of the interior wall. Tightness is provided by compressible PVC seals offering fast assembly and later damage-free removal.

ETP panels are used for supply and return air plenums above or below clean rooms. Very flexible for customization purposes, they are airtight and tough.

Hinged doors

Tough and attractive, hinged doors are mounted on almost flush aluminium door frames.

Facings available are of powder coated steel sheet (a choice of colours).

Depending on clear opening dimensions, doors have one or two leaves. They can be fitted with vision panel, door closer, recessed automatic drop-down bottom seal, panic bar, push plate, pull handle,...

Special throughway doors for equipment with one or two leaves and a tubular metal door frame assembled on site are also available.

Tight sliding doors

Sliding doors are available in single or double leaf configuration, can be powder coated sheet metal (choice of shades), laminated (choice of shades) or fully glazed. The slide mechanism is clad with a powder-coated, round shaped aluminium hood, easy to clean.

Manual or automatic, it can be fitted with a vision panel and kick plate.

Glazings

Semi flush glazings are assembled in factory or on site with aluminium frame. Two variants are available : one or two almost flush single panes. The finishing profile is systematically snapped into place on site.

Alternative offer : fully flush assembled in factory.

Specific products

Door kits allow the management of airlocks on hinged or sliding doors.

Many specific products are feasible : glazed half partitions, wall access, emergency exit break glass units, etc.... Consult us !

Ultra Clean Line

The Ultra-Clean line meets the requirements of the pharmaceutical industry, of healthcare, scientific research and advanced technology.

Enclosure elements are designed to meet criteria for current international classes. Their high levels of finish match the needs of very demanding environments and sensitive applications.

Removable panels allow for great flexibility of configuration of clean rooms.

Every panel integrates two recesses for cable raceways. Assembly on adjustable belts enables the flooring to be flush with panels.

An airtight envelope for the protection of people and products.

Panels

Partition walls and ceilings are made up of monoblock modular panels. A core is injected or bonded between two facings. Depending on use, it can be of insulating polyurethane foam, high density mineral wool or aluminium honeycomb. Different facings are available : powder coated galvanized steel sheet, stainless steel sheet, powder coated aluminium sheet, high pressure laminated,...

Assembly can be progressive (assembly with key) or non-progressive, (panel by panel). All junctions are flush or rounded for total tightness and cleanability.

Special purpose panels

Technical mullions are designed to concentrate a set of cables at a single point. Service panel has a hollow core allowing for larger throughways for fluid or cable systems. Air extraction ducts enable the extraction of air through the interior wall.

Hinged doors

Tough and attractive, hinged doors are mounted on flush door frames for total integration with the interior wall. Door leaves are available flush on one side or both sides.

Facing options are powder coated sheet metal (choice of shades), laminated (choice of shades) or stainless steel. With one or two leaves to match clear opening dimensions, doors can be fitted with vision panel, door closer, recessed automatic drop-down bottom seal, panic bar, push plate, pull handle,...

Available as a «reinforced tightness» variant for stuffy premises.

For very high levels of airtightness, doors are proposed with inflatable gasket.

Tight sliding doors

Sliding doors on flush frames are available as single or double leaf, can be powder coated sheet metal (choice of shades), laminated (choice of shades) or fully glazed. The slide mechanism is clad with a powder-coated, round shaped aluminium hood, easy to clean.

Manual or automatic, it can be fitted with a vision panel and kick plate.

Double flush glazings

«Breathing» glazing sections are made up of flush double pane glass. Accessories include multi-directional blinds and/or manual or powered blinds that can be raised to full height or partially.

For moist ambient conditions, an «airtight» triple glazed version is available.

Light fittings

Totally recessed into ceiling panels, light fittings are easily dismantled either from above and below. Two variants are available : a light fitting with low luminance diffuser or one with white translucent glass.

Finishing

Large finishing accessories : coving sections, skirting, wall protection systems,...

These finishes ensure a good life span for products and compliance with hygiene standards.

Specific products

Door kits for airlocks, glazed half partition, wall access, housings for extinguishers and safety equipment, serving hatches, emergency exit break glass units, furniture for locker rooms....Consult us !
