

The image shows a Mitsubishi Electric E1000 inverter, a common industrial drive used for controlling AC motors. The unit is light grey with a black control panel on the left side. The panel includes a small LCD screen, two status LEDs (F1, F2), and a set of buttons for emergency stop (ESC), forward (FWD), reverse (REV), and run (RUN). A large red emergency stop button is also present. Below the buttons is a terminal block for wiring. The right side of the unit is covered in vertical cooling fins. Safety labels are prominently displayed on the control panel, including a 'WARNING' label with a lightning bolt symbol and a 'CAUTION' label with a flame symbol. The Mitsubishi logo and model name 'E1000' are visible at the top left of the panel.
