COOLING TOWER TC.EE AND TX.EE SERIES

TRUWATER COOLING TOWERS SDN BHD

WHY IS IT GREEN?

TC.EE counterflow & TX.EE crossflow cooling towers are designed with high thermal efficiency transfer and they offer low power consumption as low as 0.025 kW/ HRT to reduce overall energy consumption in the buildings or premises. Motors & fans used are also suitable for variable speed drive application to facilitate partial load demand.

The towers are designed with high efficiency drift eliminators which ensure low drift loss not exceeding 0.005% of the design water flow rate, thereby reducing the overall building & premises water consumption. In encouraging rainwater harvesting, the cooling towers material used are suitable for the application where rainwater harvest is being used as the makeup water supply of the cooling towers.

PRODUCT FEATURES

TC.EE counterflow & TX.EE crossflow cooling towers are induced draft, film filled, square cooling towers which are available in a wide range of nominal box size & motor kW combination to meet site & client's requirements where the cost of energy, space and labour is always a concern.

Options such as safety maintenance platform complete with safety railings, caged ladder and gear drives are available. The cooling tower could be supplied with Pultruded FRP or Stainless Steel Mainframe structure.

PRODUCT COMPLIANCE

CTI Certification Standard STD-201 (11)
