air pollution control

Farr APC

APC Capabilities Brochure

Applications & Market Focus

Cleaning up the workplace, for today...and tomorrow.

Saving energy and increasing production efficiency while controlling indoor air quality is a challenging aspect of plant management. Dust collectors—whether used for pollution control or product recovery can impact all these areas. Farr APC can help solve your dust problems.

State-of-the-art manufacturing

- State-of-the art testing facilities
-  Every piece of Camfil Farr equipment is manufactured at an ISO 9001 certified facility.
- The most technologically advanced dust collection systems on the market.
- Quality product from design to shipment.
- Four locations:
Collectors can be built in Jonesboro, Arkansas, USA; Manchester, England; Laval, Quebec, Canada; or Malaysia.
- Streamlined manufacturing through CNC production equipment and certified welders.
- Guaranteed high quality dust collectors available...fast!

Worldwide Support

- **Readily available detailed information** on all Camfil Farr products and services.
- **Authorized Camfil Farr representatives near you.**
- **Camfil Farr trained specialists provide the best solutions** to today's complex air pollution challenges.

Farr APC is a proud member of the Camfil Farr Group—
A leading worldwide filtration company dedicated to clean air!

Mission Statement

*We will clean dust and fumes from factories,
making them safer and more productive.*

*We will ship collectors fast while still
giving the customer what they want.*

*We will be the most customer friendly company
in the Air Pollution Control Business.*

*We will make the best dust collector in the business from
an end user operation and maintenance view point.*

Jonesboro, Arkansas, USA—
Farr APC Headquarters and Production Facility.

Gold Series® Units on Seed Processing

The most rugged, reliable,
easy to maintain dust
collectors you will ever
own—**GUARANTEED!**

Engineering— Your filtration solution

- You talk, we listen.
- Engineering group works hand-in-hand with the customer.
- Team of product support personnel dedicated to providing application engineering and processing your order.
- Engineers extensively involved with indoor air quality requirements.
- Fully-integrated manufacturing process—we make the dust collector and the filter cartridges in-house.

Gold Series® Installation on Weld Smoke

SS Side Draft Hoods for Food Additives

Seeing is Believing!

Once you see Farr Dust Collectors in action for yourself, you'll understand. Let us bring our traveling display unit to you. Call Farr today for details.

Testing Capabilities

Farr takes the guesswork out of dust collection.

Farr APC’s goal is to test your dust to make sure you get the best possible dust collection solution for your operation.

Dust Testing

- **Thorough testing and analysis** turn guesswork into **FACTS (Farr Air Cleaning Test System)**.
- **The most complete, state-of-the-art dust collection testing facilities.**
- **Full-scale testing apparatus** utilizing every major category of dust collector.
- **Evaluation** of different media types, filter configurations, air-to-media ratios, temperatures, airflows and dust loading conditions as needed.
- **Small sample testing results in highly accurate identification of the contaminant. Pinpoint characteristics** including particle size distribution, specific gravity, shape and structure, solubility and hygroscopicity.
- **The end result takes the guesswork out of application design and turns it into a science.**

Farr APC guarantees our dust collectors to meet applicable local, state and federal emission control standards. Whether exhausting outside (EPA compliance) or recirculating (OSHA compliance) Farr APC can solve your dust problems.

Gold Series® Collectors Come With a 12 Year Warranty

Gold Series Units for a Laser Table Manufacturer

Gold Series® –Customized for Original Equipment Manufacturers (OEM).

Farr APC can work with any OEM to create a dust collector solution that will fit unique applications.

GS6's for Copper Mining

GS8's for Dryer Manufacturer

GS60 on Windmill Tower Grit Blasting

GS20 on Aluminum Shot Blasting

GS48 on weld fumes with integral HEPA

Welding and Grinding

We place a huge priority on clean air when welding, since weld smoke has been linked to a variety of illnesses. When welding stainless steel, toxic hex chrome can be released into the air. Farr has hundreds of installations to clean up weld smoke and grinding dust of welds. Let us help you clean up your factory and show ROI on your dust system.

GS48 on Automotive Welding

GSB on Parts Grinding

Blasting

The Farr APC team has extensive expertise in metal surface preparation applications including wheel blasting, grit/air blasting, shot peening and more. Whether it's railcars, washing machines, or heavy equipment metal preparation, we have the know-how to clean it up.

“We are very happy with the **Farr Gold Series®**. The GS36 was purchased for our CNC plasma cutter to replace a horizontal cartridge dust collector due to short filter life. The current filters have been in for over a year and still look great and are operating at less than 3” pressure drop. Also, the Farr people have been a pleasure to do business with.”
– Dan Schuler, Schuler Mfg.

Laser and Plasma Cutting

Farr works with a variety of laser and plasma OEM’s to supply the fume removal systems. Pictured is an Amada laser with a Farr GS4P custom packaged dust collector designed specifically for their table. We can customize to any OEM requirements.

GS4P Ships Completely Assembled, Just Plug and Play

GS4P for Amada Laser Table

The Gold Series® cartridge dust and fume collector combines enhanced performance with ease of service while cleaning the work environment of irritating dust and fumes.

GS16 on Zinc Arc Spray

Thermal/Flame Spray

Types of Thermal Sprays:

- Electric Arc Wire (EAW) Spraying
- Powder Spraying
- Electric Arc Spraying
- HVOF
- Plasma Spraying

Because of the various types of thermal spray applications and their effects on the operation of dust collectors, it is important to identify your specific thermal spray operation. Each process involves different shaped and sized particulate along with varying loads. Additionally, strict safety procedures need to be addressed as almost all thermal spray operations can be explosive and/or flammable. Let Farr’s expertise in this application help you to put in a safe dust removal system.

“ Over the years, we tried several types of dust collection equipment on EWA spraying. However, all previous attempts at extended filter life (more than six months) failed until we installed a high efficiency “Gold Series®” cartridge collection system manufactured by Farr. At the time of this writing, the Gold Series® collector is still performing exceptionally well without a filter change after about a year and a half.”

– David Drozd, Pamarco

Thermal/Flame Spray Before Gold Series® Turned On

Thermal/Flame Spray After Gold Series® Turned On

Farr BIBO dust collectors pulls dust off of tablet coaters like this Spectrum Coater from Thomas Engineering.

Pharmaceutical Compounds

The Gold Series® (GS) Dust Collector is useful in multiple pharmaceutical dust collection applications including tableting, encapsulation, coating operations, fluid bed and spray dryers, API/HAPI handling, excipients and general ventilation. The GS is perfect where high efficiency filtration is required. Farr APC offers BIBO containment dust collectors to avoid cross-contamination to provide personnel safety during filter changes and waste dust removal.

GS8 BIBO on Potent Compounds from Tablet Coating

GS on Vitamin Manufacturing

Multiple GS Dust Collectors on Tablet Coaters

HEPA's after Dust Collectors

Food Processing

Companies in the food processing industry take raw agricultural products (such as grains) and turn them into the food products that we eat everyday (like bread and cereal). Dust collection applications can include dried food ingredients from coarse grains to fine spices and additives. Farr APC has numerous Gold Series® on these applications.

GS24 Connected to SS Hoods Below on Spice Dust Collection

GS10 on Cereal Ingredients

SS Side Draft Hoods for Spice Weighing

This monster Gold Series® application is on a multiple tablet coater application.

These GS60's are redundant systems—one is in use at all times while the other serves as at-the-ready back up. A dozen horizontal style dust collectors were removed from this vitamin manufacturer, and all airflow was consolidated into one large system outside thereby reducing maintenance and complying with explosion safety issues related to NFPA.

Paper Shredder at a Printer

Paper Scrap Systems

Farr APC has literally hundreds of installations for paper trim and scrap handling applications. The Gold Series® is customized to accommodate the fibrous nature of the dust. Typically a cyclone or screen separator drops scrap into a bailer, and the GS filters the exhaust air from the cyclone or separator. Ohio Blow Pipe is one of FARR's preferred providers in this application.

Overbags Extend Filter Life

GS16 on Printing

GS108 on Corrugated Box Scrap

“ We were skeptical at first of a cartridge collector on wood dust, we had always used bags. But we have to say that the Gold Series® cartridge collector is working great and has exceeded our expectations.”

– Elvin Hurst Jr., Kountry Kraft Kitchens

Wood Working

There are several unique features of the Gold Series® that makes it work so well on wood and paper applications.

- The vertical arrangement and wide spacing between the cartridges keep material from bridging between them and plugging the collector.
- Cartridge overbags keep large shavings out of the cartridge pleat while allowing the finer material to pass through to be captured by the filter media.
- One cartridge will replace more than 10 bags when compared to a baghouse.

The Gold Series® has proven itself to work very well on difficult fine wood dust applications. The Gold Series® works on applications where most other dust collectors have failed.

GS16 on Wood Dust

GS48 on Wood Finish Sanding

Mining

Farr APC can help your mine reduce overall emissions, thus allowing you to produce more product. Our GS dust collector has been stack tested at 0.0003 gr/dscf emissions on heavy duty rock crushing.

GS Units on Crushing Copper Ore

Chemical Processing

Gold Series® dust collectors are installed in a wide variety of chemical processing applications. We can send a factory authorized local representative to your factory to evaluate your process.

Stainless Steel High Vacuum (HV) Gold Series®

Paint Pigment

Three GS6's on Yellow Paint Pigment

Seed Processing

Farr APC has become an industry leader in seed cleaning, preparation and coating applications. With installations on nearly every continent, we can customize a system to keep your seed plant clean.

Multiple GS Dust Collectors on Corn Processing

Two GS20's on Seed Cleaning

Rubber Grinding

Rubber grinding process poses a difficult challenge for dust collectors. Oils can be released from the rubber, plugging most dust collectors. The Farr team has figured out how to get the longest life out of the filters using oil resistant HemiPleat® filters in our Gold Series® dust collectors.

Engine Belt

Rubber Automotive Belt Grinding Installation

The fiberglass pictured is used in manufacturing the hulls of these boats.

GS48 on Chopped Fiberglass

GS48 on Chopped Fiberglass

Fiberglass and FRP

Farr APC has installations in both the fiberglass manufacturing industry and fiberglass reinforced plastic (FRP) finishing industry. Our unique overbag and vertical Gold Cone™ filters enable us to shed the fibrous dust and achieve long filter life.

The Gold Series® uses less duct work to get airflow in and out of the collector than traditional cartridge collectors.

Pictured here is a comparison between similar size Gold Series® collectors and regular cartridge collectors.

THEIRS

The Most Advanced Dust Collector Media Ever Made

- Poly-Tech™ media's filtration efficiency is 99.99% on the 0.5 μ and larger particles.
- The Gold Series meets the 5 mg/m³ or less emissions required to recirculate air back on non-hazardous dusts in most cases.
- Poly-Tech™ media is offered with a flame resistant treatment and carbon impregnated for static drain.
- Other media options include Dura-Pleat® for sticky dusts and PTFE for the demanding applications.

Gold Cone Key Benefits:

- High filtration efficiency
- Low Pressure Drop
- Long filter life

Gold Cone™ Cartridge

- Vertically mounted to shed dust readily for efficient cleaning and longer service life.
- Features a cone in the center of the cartridge.
- Cleaning is accomplished by pulse waves that emanate outward also expanding the area of the cartridge.
- Test results indicate that this new pulse distribution method provides enhanced cleaning.
- More efficient operation, longer cartridge life and reduced service requirements.

The HemiPleat® will improve the performance of any cartridge dust collector...guaranteed.

Has this happened to you?

We make filters to fit any of our competition's dust collectors.

Replacement Filters

Gold Cone™ Filters

Farr APC Gold Series® cartridges have an expanded capacity due to the patented inner Gold Cone™. This inner cone increases media area and provides uniform dispersion of back-pulsed air. It also opens up more usable space for air flow in the filter.

Tenkay® Filters

Tenkay® Filters are replacement elements for aspirated cartridge dust and fume collectors and gas turbine filter houses. Greater media utilization and more effective filtration provide enhanced performance, longer service life.

OEM Replacement Filters

Farr APC can supply its patent pending HemiPleat® technology and high filtration efficiencies to almost any dust collector. Call our in-house filter specialists to see if we can provide longer life and better efficiency for your existing dust collector.

HemiPleat® vs. Typical Pleats

No matter which dust collector you have, the HemiPleat® filter can improve its performance. *Guaranteed.*

Media Comparison

The HemiPleat's high quality uniform pleat pack establishes the superiority of this cartridge over all other products in the market. The difference in pleating quality can be seen at left in a comparison against the media pack with typical industry pleats. Notice the difference in pleat spacing and alignment.

HemiPleat® Advantages

- Lower pressure drop through open pleat spacing improves cleaning efficiency, which will reduce energy costs through less compressed air consumption during cleaning in many applications.
- More media is available for filtration, for improved performance and longer life.
- The separation beads, not the media pleats, contact the inner cage, protecting the media from frictional damage.
